**Ecological Planning Regions:**

- Northern Forest       Forest/Prairie Transition       Southeast Forest  
 Prairie       Metro/Urban

**Activity Type:**

- Protect     Restore       Enhance

**Priority Resources addressed by activity:**

- Wetlands     Forests       Prairie       Habitat

**Project Abstract**

An initiative that bridges the resource benefits of the Outdoor Heritage Fund (LSOHC) and Clean Water Fund (CWF) through enrolling 2,857 acres of enhanced wildlife buffers in partnership with private landowners.

## Project Narrative

Loss and fragmentation of grassland habitat is the greatest threat to grassland wildlife in Minnesota. This partnership program permanently adds grassland habitat and reduces fragmentation by combining the efforts of outdoor heritage and clean water. Building upon the 100-foot RIM buffers funded through the Clean Water Fund, we propose to add additional buffer width (up to NRCS 393 standard for CRP buffers) to make clean water buffers more attractive and productive for wildlife. Furthermore, these wildlife buffers will be targeted for landscapes with existing permanently protected habitat to accelerate progress toward achieving minimum thresholds of grass habitat required by waterfowl and other wildlife of conservation need. We propose that LSOHC fund \$5.5 million in perpetual state RIM buffer easements prioritized to build upon the 100' RIM buffers funded through the Clean Water Fund. This program brings together two key components of the dedicated funding amendment that Minnesotans voted on in 2008 – clean water and wildlife. Where buffers for wildlife habitat are a priority and clean water funds not available, stand alone wildlife buffers would be made available to private landowners through this program.

Additionally, this program takes full advantage of USDA conservation programs for riparian corridors like the Conservation Reserve Program and Wetlands Reserve Enhancement Program to deliver a sound option for private landowners to provide much needed grassland nesting habitat along with water quality protection of rivers, ditches, lakes, and streams.

## Design and scope of work

Minnesota has an estimated 21,500 miles of open drainage ditch and 170,338 miles (each side) of riparian areas within 67 counties that have at least 30% of their land base in cropland (see

[://www.bwsr.state.mn.us/easements/Cultivated Riparian Zone Analysis](http://www.bwsr.state.mn.us/easements/Cultivated_Riparian_Zone_Analysis)).

Approximately 57,828 acres or 1/3 of this riparian area already contains a buffer of at least 50 feet. The remaining 112,510 miles are likely in need of buffering. Adding a 100' buffer for water quality (under USDA's Filter Strip Conservation Practice Standard 393) would result in 1.3 million acres. And, extending those buffers out another 100' for wildlife and long term buffer viability would double that amount for a total of 2.6m acres. It would be our long-term goal to enroll 25% (28,127 mi. or 650,000ac.) of these miles in permanent conservation easements for water quality and wildlife habitat. In addition, Minnesota currently has just over 200,000 acres of Conservation Reserve Program in buffer practices at various stages of their 10-15 year contracts, some soon to expire. The buffer initiative would compliment other programs, both existing and yet to be determined over the next 25 years.

## Planning

Restoration of grass habitat is cited as a top priority for the *Long Range Plan for the Ring-neck Pheasant in Minnesota*, the *Long Range Duck Recovery Plan*, and *Minnesota's Comprehensive Wildlife Conservation Strategy*. Many species of conservation need benefit from large habitat patches and some require a minimum threshold of grassland habitat within a landscape. This program will contribute toward the development of new habitat complexes and enhancement of existing habitats by expanding the size of narrow corridors and connecting them to large, permanently protected grasslands, wetlands, and shallow lakes. For example, placing 200-foot grassland buffers (400 feet wide when buffered on both sides of a ditch or stream) on the landscape will achieve the following recommendations identified in the *Statewide Conservation and Preservation Plan – Final Plan, Phase II*. 1. Land protection (2,857 acres) 2. Protect critical shore lands of streams and lakes (60-120 miles of shoreline permanently protected in grass) 4. Restore and Protect Shallow Lakes (prioritized for protection) 5. Restore land, wetlands, and wetland-associated watersheds 7. Keep water on the landscape (2,857 acres of grass along streams, rivers, and ditches).

Agricultural expansion, biofuel production, and expiration of Conservation Reserve Program contracts have recently accelerated the loss of grass habitat in Minnesota. This program will use RIM and leverage USDA conservation programs (e.g. CRP & WREP) to deliver multiple enduring conservation benefits of clean water and wildlife habitat. In addition, buffers for wildlife under this program will be prioritized based upon their ability to enhance public land habitats (e.g., WPA's or WMA's), protect expiring CRP lands, add key nesting cover to wetland/upland complexes, provide maximum water quality benefits, and enhance shallow lakes. A scoring mechanism will be employed to fund high quality wildlife buffer enhancements and target the funds to deliver the aforementioned priorities.

Delivery of this program will be under a coordinated approach that brings together Minnesota BWSR, Minnesota DNR, local SWCD's, Pheasants Forever and other key conservation partners interested in private land conservation. This program balances the need for quality wildlife habitat, water quality, and what works for farmers and landowners within their operation.

## Relationship to Other Constitutional Funds

There is no direct relationship to other constitutional funds at this time. This program would ideally build a better program for Minnesota private landowners by providing flexibility in enrollment while maximizing clean water and wildlife benefits of buffers. This program will prioritize enhancing Clean Water Funding buffers with Outdoor Heritage Funded buffers. The result will be cleaner waters and abundant wildlife in Minnesota. Should Clean Water Funding fail to partner with this initiative, this program would put 2,857 acres of buffers on the landscape following the prioritization for wildlife derived in this initiative. Indirectly, the Farm Bill Assistance Partnership with BWSR,

DNR, PF and SWCD's pays for technicians that promote state and federal conservation programs to private landowners. The ENRTF provided \$1M via LCCMR recommendation beginning July 1, 2009 and ending June 30, 2011.

### Relationship to Current Organizational Budget

This program accelerates permanent protection of buffers for wildlife and water quality. This opportunity would not occur without support from the Outdoor Heritage Fund (& builds upon the activities of the Clean Water Fund). This proposal is intended to be additive to any traditional sources of RIM funding. The RIM Reserve program was established in state statute in 1986 to restore and set aside marginal land principally for increasing fish and wildlife populations. Past funding via bonding varies, ranging from \$0 to a one-time maximum of \$52M for Minnesota River CREP. BWSR last received bonding funds in 2008. The RIM Reserve program is not funded by general revenue and is not part of BWSR's agency base budget.

### Sustainability and Maintenance

All easements secured under this project will be permanent in nature. Under the terms of the Reinvest in Minnesota (RIM) easement program, landowners are required to maintain compliance with the easement and manage the conservation cover. A conservation plan is developed with the landowner and maintained as part of the easement. Initial costs to establish conservation cover are covered under this project as part of the easement with additional assistance from USDA-CRP program. These additional buffer easements will be managed along with the other 5,000 conservation easements within the MN Board of Water and Soil Resources (BWSR). Currently BWSR and Soil and Water Conservation Districts have a process for easement tracking, quality assurance, and compliance. Easements are reviewed in the field annually for each of the first 5 years and then every 3rd year after that. Annual costs for compliance are approximately \$100/easement. It is estimated that this project will result in 280 easements with an annual cost of \$28,000.

### Types of Projects

#### Fee Acquisition Projects

Will local government approval be sought prior to acquisition?

Yes                       No, please explain                      X not applicable

If no, please explain here:

Is the land you plan to acquire free of any other permanent protection?

Yes                       No, please explain                      X not applicable

If no, please explain here:

### Easement Acquisition Projects

Will the eased land be open for public use?

Yes                      X No, please explain                       not applicable

If no, please explain here: Reinvest in Minnesota Easements are perpetual, but control of the land remains with the private landowner. Access for outdoor recreation may be obtained with the permission of the landowner.

Will the conservation easement be permanent?

X Yes                       No, please explain                       not applicable

If no, please explain here:

### Restoration and Enhancement Projects

Is the activity on permanently protected land and/or public waters?

X Yes                       No, please explain                       not applicable

If no, please explain here:

Does the activity take place on an Aquatic Management Area (AMA), Scientific and Natural Area (SNA), Wildlife Management Area (WMA), or State Forests?

Yes, which ones                      X No, please explain                       not applicable

If so, please indicate which ones: Restoration of cropland to grassland may occur on new perpetually protected RIM easements that are not enrolled into USDA programs.

### Accomplishment Timeline

<b>Activity</b>	<b>Milestone</b>	<b>Date</b>
Design Wildlife Buffer Evaluation Worksheet	Complete worksheet	July 2011
Obtain habitat buffer proposals from willing private landowners	Conduct competitive sign-up for habitat buffers program	Before 12/1/2011
Score proposals and bring project list before LSOHC	Obtain easement project list approval from LSOHC	Winter 2012
Easement development & recording	2,857 Acres of habitat buffers enrolled	Ongoing after approval in 2012
