

Lessard-Sams Outdoor Heritage Council

Laws of Minnesota 2014 Final Report

Date: January 22, 2020

Program or Project Title: Prairie Recovery Project Phase 5

Funds Recommended: \$3,940,000

Manager's Name: Neal Feeken

Organization: The Nature Conservancy

Address: 1101 W River Parkway

Address 2: Suite 200

City: Minneapolis, MN 55415

Office Number: 612-331-0738

Email: nfeeken@tnc.org

Website: www.nature.org

Legislative Citation: ML 2014, Ch.256, Art. 1, Sec. 2, Subd. 2(c)

Appropriation Language: \$3,940,000 in the second year is to the commissioner of natural resources for a contract with The Nature Conservancy to acquire native prairie, wetlands, and savanna and restore and enhance grasslands, wetlands, and savanna. A list of proposed land acquisitions must be provided as part of the required accomplishment plan and must be consistent with the priorities identified in the Minnesota Prairie Conservation Plan. Lands acquired with this appropriation may not be used for emergency haying and grazing in response to federal or state disaster declarations. Conservation grazing under a management plan that is already being implemented may continue. Subject to the evaluation criteria under Minnesota Rules, part 6136.0900, priority must be given to acquisition of lands that are eligible for the native prairie bank under Minnesota Statutes, section 84.96, or lands adjacent to protected native prairie. Annual income statements and balance sheets for income and expenses from land acquired with this appropriation must be submitted to the Lessard-Sams Outdoor Heritage Council no later than 180 days following the close of The Nature Conservancy's fiscal year.

County Locations: Becker, Big Stone, Chippewa, Clay, Kandiyohi, Kittson, Lac qui Parle, Mahnomon, Marshall, Norman, Pennington, Polk, Pope, Red Lake, Roseau, Stearns, and Swift.

Eco regions in which work was completed:

- Northern Forest
- Forest / Prairie Transition
- Prairie

Activity types:

- Restore
- Enhance
- Protect in Fee

Priority resources addressed by activity:

- Wetlands
- Prairie

Summary of Accomplishments:

This project contributed to the goals of the MN Prairie Conservation Plan by protecting 698 acres of native prairie/wetland/savanna; restoring 698 acres prairie/wetland; and enhancing 18,839 acres grassland/savanna. When combined with Phases 1-4 of the Prairie Recovery Program we have cumulatively protected 6,475 acres, enhanced 114,595 acres and restored 1,452 acres using Outdoor Heritage Fund dollars. We will continue to implement subsequent Phases toward meeting the conservation goals described in the MN Prairie Conservation Plan.

Process & Methods:

Scope of work: With the requested funding the following actions and outcomes were achieved:

Phase 5 built upon the success of the MN Prairie Recovery Project Phases 1-4 by continuing and expanding enhancement and protection work in 4 focal areas. Project partners, primarily through our participation in Prairie Plan Local Technical teams, helped us to prioritize and refine guidelines for protection, enhancement and restoration activities within priority landscapes. The Prairie Recovery Program utilizes a collaborative model for conservation and we regularly consult and work with a variety of entities including state and federal agencies, other conservation nonprofits, agricultural producer groups and local governments.

698 acres of existing and restorable grassland, prairie pothole wetland complex, and savanna were permanently protected within prairie core and corridor areas as defined in the MN Prairie Conservation Plan. Lands are held by The Nature Conservancy, subject to a recorded notice of funding restrictions pursuant to LSOHC requirements. All lands acquired in fee are FULLY open to hunting and fishing per state of Minnesota regulations. Basic developments have been, and will continue to be, implemented (boundary signage, habitat improvement, wetland restoration). Protection efforts were coordinated with other partner protection programs (e.g., DNR Wildlife Management Area and Prairie Bank programs), via interactions through Local Technical Teams. An internal fund has been established by The Nature Conservancy to cover ongoing land-management costs and property tax obligations. Income generated by agricultural leases (grazing, haying, and/or cropping) are held in this account and help offset property taxes.

Coincidentally, exactly 698 acres of cropland and former foodplots were restored to diverse, local-ecotype grassland or grassland/wetland complex. Extensive effort was made to collect seed from local sources that cover the full season (early spring through late fall) needs of native pollinators. Seed sourcing included both mechanical and hand collection.

18,839 acres of grassland complex were enhanced on public lands and those purchased with OHF funds and held by the Conservancy ("protected conservation lands") to increase native species diversity and improve critical wildlife habitat. Management techniques included prescribed fire (50 projects impacting 11,730 acres), removal of woody vegetation (40 projects for 3,048 acres), control of exotic species (70 projects - 3,930 acres), and inter-seeding of degraded grasslands (13 projects - 131 acres). Much of this work was accomplished by private vendors through contracts. We also extensively used Conservation Corps of Minnesota (CCM) crews and seasonal staff employed directly by TNC.

On-the-ground Conservancy staff provided by this grant were co-located in DNR or US Fish and Wildlife Service offices and helped form and lead local coordination and implementation teams; identified protection, restoration and enhancement needs and opportunities within the focus areas; worked with DNR and USFWS staff to delineate conservation projects on public lands; coordinated deployment of contract and staff resources to protected conservation lands; contacted and worked with private landowners to coordinate agricultural activities/leases on appropriate protected conservation lands (e.g., haying, grazing, cropping in advance of restoration); educated lessees on appropriate conservation grazing/haying practices; supervised management of lands acquired above; planned and conducted prescribed burns; and other activities related to prairie conservation in the focus areas.

Contracts were let to provide a high level of enhancement activities to new and existing protected conservation lands, greatly expanding current capacity. These activities improved the habitat value of public lands that were not receiving adequate management treatment, while simultaneously providing local jobs through CCM and businesses. Activities included removal of undesirable woody vegetation, identification and treatment of invasive species infestations, removal of abandoned fences and/or other structures, and related restoration/enhancement activities.

To ensure goals and outcomes are consistently achieved across all 4 project areas, a project coordinator oversaw implementation of the above activities and provided administrative support for budget monitoring and reporting. Significant marketing and media outreach was conducted by the Conservancy to highlight the goals and accomplishments of the project to local and statewide constituents, as well as elected officials. <http://www.nature.org/ourinitiatives/regions/northamerica/unitedstates/minnesota/policy/minnesota-prairie-recovery-project.xml>

Temporary seasonal crews were employed by the Conservancy to provide additional capacity for public land management during critical periods like spring burn season. These crews helped create flexibility for enhancement projects and maximized the ability of specialized skilled personnel like burn bosses to increase the number of acres annually enhanced.

2. How priorities were set: Prioritization and prioritization criteria vary with the conservation tactic being employed (i.e., protection, restoration, enhancement). Focus areas were selected where there was overlap with MN County Biological Survey prairie "focus areas" and TNC portfolio areas. Each of the 4 project geographies directly correlate to core areas identified in the MN Prairie Conservation Plan. Because this project is a collaborative effort involving multiple partners, tactical priorities and criteria were established at both the state and local level by respective coordinating groups. criteria for each of these tactics include:

a. Protection: location/proximity to other habitats, location/proximity to other protected lands, presence of rare/endangered species, imminence of conversion, ability to support grazing, size, cost, and likelihood for leveraged funding. A more robust listing of selection criteria can be provided upon request.

b. Restoration: feasibility/likelihood of success, location, cost, availability of seed, and availability of restoration technical assistance, proximity to other habitats, and their ability to buffer or increase the conservation value of other protected lands.

c. Enhancement: urgency/time since last enhancement, feasibility of success, accessibility, availability of enhancement technical assistance, cost, proximity to other habitats and partnership benefits.

Explain Partners, Supporters, & Opposition:

Working in partnership is a key component to the success of this project. Almost all of the enhancement work occurs on lands owned and managed by MN DNR or the US Fish & Wildlife Service. Further, the biologists who are responsible for on-the-ground implementation are stationed either in FWS or DNR offices. Finally, the Local Technical Teams constituted under the MN Prairie Conservation Plan play a key role in prioritizing the protection, restoration and enhancement projects.

Additional Comments:

Exceptional challenges, expectations, failures, opportunities, or unique aspects of program

Similar to the first four phases the Prairie Recovery Program exceeded the outcome goals for Phase 5. We have been highly successful in protecting critical native prairie/wetland tracts and engaging partners to accelerate enhancement activities on permanently protected lands. A goal of the Program is to demonstrate that conservation activities can also produce revenues sufficient to offset management and property tax obligations. This model has proven insufficient, though generated revenues are a meaningful source of funds to meet property tax demands, accounting for approximately 1/3 of the funds needed for tax purposes. The remaining 2/3 obligation is met with private funds through TNC. The insufficiency is due in part to the fact that many of the newly acquired lands have been overgrazed or under-managed for many years and require several years of rest before they are in sufficient condition to allow for conservation based grazing.

Other Funds Received:

- Environmental and Natural Resource Trust Fund

How were the funds used to advanced the program:

Project activities are being coordinated with a number of existing and proposed OHF projects that collectively strive to implement recommendations found in the MN Prairie Conservation Plan. Partners to the plan, including The Nature Conservancy, are actively pursuing Environment and Natural Resources Trust Fund dollars to investigate the implications of grassland management practices like conservation grazing on native plant communities, grassland nesting birds and native pollinators.

What is the plan to sustain and/or maintain this work after the Outdoor Heritage Funds are expended:

The prairie pothole landscape is sustained through the regular application of appropriate disturbance, including fire, grazing and haying. A chronic problem for land managers is securing adequate funding to do these conservation practices as frequently as needed (e.g., every 1-4 years). A primary purpose of this project was to establish a collaborative and coordinated partnership that can accelerate the application of these management techniques across multiple landscapes. On existing protected conservation lands, an annual infusion of funding will be required. For new lands acquired under this proposal, we attempted to establish a new funding model by securing partial management funds by generating conservation compatible income from acquired lands. In addition to the conservation value of planned haying and grazing, the income generated by these agricultural leases can help offset management costs and property taxes. And while these revenues have consistently proved to be inadequate to cover tax obligations they do offset a portion of the costs and the Conservancy remains committed to making up the difference.

Outcomes:

The original accomplishment plan stated the program would

Programs in the northern forest region:

- Not Listed

How will the outcomes be measured and evaluated?

Not Listed

Programs in forest-prairie transition region:

- Protected, restored, and enhanced aspen parklands and riparian areas
- Protected, restored, and enhanced nesting and migratory habitat for waterfowl, upland birds, and species of greatest conservation need
- Wetland and upland complexes will consist of native prairies, restored prairies, quality grasslands, and restored shallow lakes and wetlands
- Water is kept on the land

- Remnant native prairies are part of large complexes of restored prairies, grasslands, and large and small wetlands

How will the outcomes be measured and evaluated?

Protection results are measured against MN Prairie Conservation Plan goals for protected acres of native prairie and associated grassland for each geography. Enhancement results are measured using protocols developed for the multi-agency Grassland Monitoring Network

Programs in prairie region:

- Expiring CRP lands are permanently protected
- Improved condition of habitat on public lands
- Restored and enhanced upland habitats
- Agriculture lands are converted to grasslands to sustain functioning prairie systems
- Increased wildlife productivity
- Remnant native prairies are part of large complexes of restored prairies, grasslands, and large and small wetlands
- Key core parcels are protected for fish, game and other wildlife
- Remnant native prairies and wetlands are perpetually protected and adequately buffered
- Water is kept on the land to reduce flood potential and degradation of aquatic habitat

How will the outcomes be measured and evaluated?

Protection results are measured against MN Prairie Conservation Plan goals for protected acres of native prairie and associated grassland for each geography. Enhancement results are measured using protocols developed for the multi-agency Grassland Monitoring Network

Budget Spreadsheet

Explain any budget challenges or successes:

We were pleased to be able to spend our entire appropriation within the allotted time frame. There is a significant benefit to implementing a multiple phased program as it provides flexibility with project selection and allows continuity of cash flow for ongoing and similar projects.

All revenues received by the recipient that have been generated from activities on land with money from the OHF:

Total Revenue: \$175,665

Revenue Spent: \$175,665

Revenue Balance: \$0

- A. This revenue, or a portion of it, was used according to the appropriation purposes approved in the AP.

Target Lake/Stream/River Feet or Miles (original)

0

Target Lake/Stream/River Feet or Miles (final)

0

Explain the success/shortage of acre goals:

We completed 77% of the proposed fee-title w/out PILT acres that was originally proposed. A last second change of mind from the seller on the last project prevented us from fully achieving the goal. Unspent protection funds were rolled into additional enhancement projects per an amendment agreement with the Council.

We once again vastly surpassed both our enhancement and restoration goals. Favorable fire season weather, development of new implementation models (both private vendors and increased use of TNC seasonal staff) were largely responsible for this success.
