

## **Lessard-Sams Outdoor Heritage Council**

MN Prairie Recovery Project - Phase VI Laws of Minnesota 2015 Final Report

## **General Information**

Date: 01/11/2023

Project Title: MN Prairie Recovery Project - Phase VI

Funds Recommended: \$4,032,000

**Legislative Citation:** ML 2015, First Sp. Session, Ch. 2, Art. 1, Sec. 2, Subd. 2(c)

**Appropriation Language:** \$4,032,000 in the first year is to the commissioner of natural resources for an agreement with The Nature Conservancy to acquire native prairie, wetlands, and savanna and restore and enhance grasslands, wetlands, and savanna. Subject to evaluation criteria in Minnesota Rules, part 6136.0900, priority must be given to acquisition of lands that are eligible for the native prairie bank under Minnesota Statutes, section 84.96, or lands adjacent to protected native prairie. Annual income statements and balance sheets for income and expenses from land acquired with this appropriation must be submitted to the Lessard-Sams Outdoor Heritage Council no later than 180 days following the close of The Nature Conservancys fiscal year. A list of proposed land acquisitions must be provided as part of the required accomplishment plan and must be consistent with the priorities identified in the Minnesota Prairie Conservation Plan.

#### **Manager Information**

Manager's Name: Neal Feeken

**Title:** Prairie Recovery Project Coordinator **Organization:** The Nature Conservancy **Address:** 1101 W River Parkway Suite 200

City: Minneapolis, MN 55415 Email: nfeeken@tnc.org

**Office Number:** 612-331-0738

Mobile Number: Fax Number:

Website: nature.org

#### **Location Information**

**County Location(s):** Clay, Polk, Pope, Stearns, Marshall, Chippewa, Lac qui Parle, Big Stone, Kandiyohi, Swift, Kittson, Roseau, Pennington, Becker, Mahnomen, Red Lake and Norman.

#### Eco regions in which work will take place:

- Forest / Prairie Transition
- Prairie

#### **Activity types:**

- Protect in Fee
- Restore
- Enhance

#### Priority resources addressed by activity:

- Wetlands
- Prairie

## **Narrative**

## **Summary of Accomplishments**

This project contributed to the goals of the MN Prairie Conservation Plan by protecting 539 acres of prairie/wetland/savanna habitat; restoring 151 acres prairie/grassland; and enhancing 24,604 acres grassland/savanna. We will continue to implement subsequent Phases toward meeting the conservation goals described in the MN Prairie Conservation Plan.

#### **Process & Methods**

Phase 6 built upon the success of the MN Prairie Recovery Project Phases 1-5 by continuing and expanding enhancement and protection work in 4 focal areas. Project partners, primarily through our participation in Prairie Plan Local Technical teams, helped us to prioritize and refine guidelines for protection, enhancement and restoration activities within priority landscapes. The Prairie Recovery Program utilizes a collaborative model for conservation and we regularly consult and work with a variety of entities including state and federal agencies, other conservation nonprofits, agricultural producer groups and local governments.

539 acres of existing and restorable grassland were permanently protected within prairie core and corridor areas as defined in the MN Prairie Conservation Plan. Most of the protected lands (499 acres) are, or are in the process of being transferred to the MN DNR for inclusion in the state's WMA system. The additional 40 acres are held by The Nature Conservancy, subject to a recorded notice of funding restrictions pursuant to LSOHC requirements. All lands acquired in fee are FULLY open to hunting and fishing per state of Minnesota regulations. Basic developments have been implemented (boundary signage, habitat improvement, wetland restoration). Protection efforts were coordinated with other partner protection programs (e.g., DNR Wildlife Management Area and Prairie Bank programs), via interactions through Local Technical Teams. An internal fund has been established by The Nature Conservancy to cover ongoing land-management costs and property tax obligations. Income generated by agricultural leases (grazing, haying, and/or cropping) are held in this account and help offset property taxes.

151 acres of cropland were restored to diverse, local-ecotype grassland or grassland/wetland complex. Extensive effort was made to collect seed from local sources that cover the full season (early spring through late fall) needs of native pollinators. Seed sourcing included both mechanical and hand collection.

24,604 acres of grassland complex were enhanced on public lands and those purchased with OHF funds and held by the Conservancy ("protected conservation lands") to increase native species diversity and improve critical wildlife habitat. Management techniques included prescribed fire, removal of woody vegetation, control of invasive species, and inter-seeding of degraded grasslands. Much of this work was accomplished by private vendors through contracts. We also extensively used Conservation Corps of Minnesota (CCM) crews and seasonal staff employed directly by TNC.

On-the-ground Conservancy staff provided by this grant were co-located in DNR or US Fish and Wildlife Service offices and helped form and lead local coordination and implementation teams; identified protection, restoration and enhancement needs and opportunities within the focus areas; worked with DNR and USFWS staff to delineate conservation projects on public lands; coordinated deployment of contract and staff resources to protected conservation lands; contacted and worked with private landowners to coordinate agricultural activities/leases on appropriate protected conservation lands (e.g., haying, grazing, cropping in advance of restoration); educated lessees on appropriate conservation

# How did the program address habitats of significant value for wildlife species of greatest conservation need, threatened or endangered species, and/or list targeted species?

Temperate grasslands are the most endangered and least protected habitat type on earth, and Minnesota's prairies are no exception. Activities identified in this project directly reflect implementation strategies identified in the MN Prairie Conservation Plan. Properties targeted for acquisition were identified and prioritized using MN County Biological Survey Rare Element Occurrences and Biodiversity Significance. The geographies we worked within, in addition to being Prairie Plan Core areas, reflect areas with the highest density and highest quality remaining prairie systems left in the state. By focusing our work in these particular landscapes we increased the functionality of the overall prairie/grassland systems, including increased water retention, improved breeding and nesting habitat and augmented migratory corridors. While our work focused on increasing and maintaining system functionality a number of individual species and suites of SPGCN directly benefited from this project including:

Insects - habitat management and protection specifically for the federally-threatened Dakota skipper butterfly, potential restoration of habitat for the endangered Poweshiek skipperling and the declining regal fritillary butterflies

Mammals - American badger (an indicator species requiring intact blocks of quality habitat), elk (for herd management in NW MN)

Reptiles - hognose snake (primarily in western MN counties of Lac qui Parle, Big Stone and Yellow Medicine), 5-lined skink (rock outcroppings in the upper MN River Valley)

Birds - Grassland dependent birds have experienced precipitous population decline across Minnesota and the northern Great Plains, largely due to habitat loss on the breeding grounds. This project will provide permanently protected and enhanced habitat for a suite of grassland and wetland nesting birds, most notably the Meadowlark, Bobolink, Dickcissel, Grasshopper sparrow, Henslow's sparrow, Upland sandpiper, Black tern, Northern pintail, Greater Prairie-chicken, Sharp-tail grouse, and many others.

# How did the program use science-based targeting that leveraged or expanded corridors and complexes, reduced fragmentation, or protected areas in the MN County Biological Survey.

The project concentrated activities on core/corridor complexes as described in the MN Prairie Plan. The plan was developed using the best available information for identifying the highest quality/highest density remaining prairie and grassland complexes in the state. Individual parcels for protection were prioritized using the attached criteria. Important considerations included % of native prairie on tract; adjacency to other native prairie; proximity to other

protected lands; and uniqueness and diversity of species present. MN County Biological Survey data and biodiversity rankings were additional key tools used to measure these criteria.

Similarly, enhancement and restoration projects were focused on core/corridor areas identified within the Prairie

Conservation Plan. Individual parcels were selected in close consultation with state and federal partners to ensure the ultimate outcomes supported both Prairie Plan and individual agency goals for the relevant landscapes.

## **Explain Partners, Supporters, & Opposition**

Working in partnership is a key component to the success of this project. Almost all of the enhancement work occurs on lands owned and managed by MN DNR or the US Fish & Wildlife Service. Further, the biologists who are responsible for on-the-ground implementation are stationed either in FWS or DNR offices. Finally, the Local Technical Teams organized under the MN Prairie Conservation Plan play a key role in prioritizing the protection, restoration and enhancement projects.

Acquisition projects are also evaluated in cooperation with partner goals to ensure the protection of individual parcels are contributing to the habitat values of larger prairie and wetland complexes.

### Exceptional challenges, expectations, failures, opportunities, or unique aspects of program

A goal of the Program is to demonstrate that conservation activities can also produce revenues sufficient to offset management and property tax obligations. This model has proven insufficient, though generated revenues are a meaningful source of funds to meet property tax demands, accounting for approximately 1/3 of the funds needed for tax purposes. The remaining 2/3 obligation is met with private funds through TNC.

Much of the work in this phase was completed pre-pandemic and allowed for extensive use of one of our most effective and under utilized management tools - prescribed fire. Making extensive use of fire, particularly in NW MN, allowed us to vastly exceed our proposed enhancement goals and resulted in significant burns with landscape scale impact. Several of the implemented burns had been on the DNR "to-do" list for more than 20 years. Favorable conditions and available funding enabled us to get them done.

## What other fund may contribute to this program?

• Other: TNC private funds

#### How were the funds used to advance the program?

Private TNC funds were used to meet operational costs brought on but not reimbursed by the grant. Further, TNC seasonal crews, biologists and equipment regularly supplemented Prairie Recovery seasonal crews in completing large projects, particularly prescribed fires.

# What is the plan to sustain and/or maintain this work after the Outdoor Heritage Funds are expended?

The prairies of western Minnesota have historically been sustained through the regular application of disturbance regimes, including fire, grazing and haying. A chronic problem for land managers is securing adequate funding to do these conservation practices as frequently as needed (e.g., every 1-4 years). A primary purpose of this project was to establish a collaborative and coordinated partnership that can accelerate the application of these management techniques across multiple landscapes. On existing protected conservation lands, an annual infusion of funding will be required. For new lands acquired under this proposal, we attempted to establish a new funding model by securing partial management funds by generating conservation compatible income from acquired lands. In addition to the conservation value of planned haying and grazing, the income generated by these agricultural leases can help offset management costs and property taxes. And while these revenues have consistently proved to be inadequate to cover tax obligations they do offset a portion of the costs and the Conservancy remains committed to making up the difference.

## **Actions to Maintain Project Outcomes**

Year Source of Funds Step 1 Step 2 Step 3
---

Annually	OHF/TNC	Monitor & treat	-	-
		invasive species		
Once every 4-5 years	OHF/TNC	Prescribed fire	-	-
As ecologically	OHF/TNC	Conservation grazing	-	-
dictated

## **Direct Support Services**

How did you determine which portions of the Direct Support Services of your shared support services is direct to this program?

Direct Support Services is based on our federal Negotiated Rate as approved by the US Dept of Interior.

#### **Explain any budget challenges or successes:**

2 unexpected fee w/PILT parcels required substantial budget amendments. The associated IDP funds took longer than anticipated to spend.

The shortfall in leverage for fee acquisition is a function of those amendments. For lands purchased w/out PILT obligation we deposit private funds amounting to 20% of the purchase price into a stewardship endowment to ensure we can manage and pay taxes in perpetuity. For lands transferred to another entity we don't deposit funds into this account. More land was purchased w/PILT obligation than proposed which resulted in a smaller amount going toward the stewardship endowment as leverage.

Total Revenue: \$14,506

**Revenue Spent:** \$14,506

**Revenue Balance:** \$0

#### Of the money disclosed above, what are the appropriate uses of the money:

- A. This revenue, or a portion of it, was used according to the appropriation purposes approved in the AP Forest.
- C. This revenue, or a portion of it, was transferred back to the OHF.

#### Itemize out how the revenues were spent:

Revenues were spent to pay property taxes. Excess revenues were deposited in an account and used to pay property taxes on OHF acquired properties. To date through the whole of the Prairie Recovery Program TNC has generated \$250,500 in revenues and paid \$568,272 in property taxes. The shortfall has been made up with TNC privately raised funds.
