# Lessard-Sams Outdoor Heritage Council Laws of Minnesota 2019 Accomplishment Plan

Date: October 18, 2018

Program or Project Title: Big Rice Lake Wild Rice Enhancement

Funds Recommended: \$845,000

Manager's Name: Ricky Lien Title: Wetland Habitat Supervisor Organization: Minnesota DNR Address: 500 Lafayette Road City: St. Paul, MN 55155 Office Number: 651-259-5227 Fax Number: 651-297-4961 Email: ricky.lien@state.mn.us Website: www.dnr.state.mn.us

Legislative Citation: ML 2019, Ch. X, Art. 1, Sec. 2, subd, X(x)

Appropriation Language:

County Locations: St. Louis

Eco regions in which work will take place:

• Northern Forest

#### Activity types:

Enhance

#### Priority resources addressed by activity:

Wetlands

#### Abstract:

Wild rice abundance has greatly declined across Big Rice Lake, while other competitive vegetation has drastically increased. This proposal will utilize knowledge gained from small-scale vegetation work as well as hydrological alterations and apply it to a lake-wide scale to enhance conditions for wild rice success. A total of 2,072 acres of wild rice habitat will be enhanced as a result of the OHF lake outlet work that will impact water levels. 850 acres of the existing 1,000 pickerel weed will be treated to allow wild rice to regenerate.

#### Design and scope of work:

Big Rice Lake historically was one of the best producing wild rice lakes in northeastern Minnesota for wild rice harvesters and migratory waterfowl use. Today, due to hydrologic alterations, stabilization of water level, and other variables, like changes in climatic conditions and impacts from wildlife herbivory, wild rice has declined across the lake and pickerelweed has become the dominant vegetation.

This proposal will accomplish 2,072 acres of wild rice habitat enhancement work on Big Rice Lake. A multi-agency effort will assist in the completion of the project and long-term success. The agencies involved include the US Forest Service, 1854 Treaty Authority, Bois Forte Band of Chippewa, Fond du Lac Band of Lake Superior Chippewa, and the Minnesota DNR Wildlife and Shallow Lakes Program. In addition to these key players, Big Rice Lake has a large recreational user group and concerned citizen following. Due to the extent of the issue and importance of the enhancement to all entities involved, it is critical that this project be completed as soon as possible.

The project will include three sections to address issues of concern. One section will address the outlet control structure that is

inefficient and impacting hydrology. The structure is a rock weir which will be removed and the outlet will be restored to the pre-weir conditions to promote natural flow dynamics. The second section will address the public access to ensure large equipment can be launched. The third section will address the pickerelweed dominance and enhance wild rice abundance. Pickerelweed will be reduced by utilizing a combination of Fond du Lac Band's airboats and harvester barge, Bois Forte Band's harvester barge, and a DNR airboat and boat with a mudmotor. Once pickerelweed is removed, wild rice will be more likely to re-establish. If wild rice does not reestablish naturally from the resident seed in the substrate, seed from another location will be evaluated and used to reseed Big Rice Lake. 850 acres of the current 1000-acre area of pickerel weed infestation will be removed.

The equipment needs will be essential to the long-term success since this project, specifically vegetation control, is predicted to require some small-scale maintenance until pickerelweed is no longer the dominant species.

Based on small-scale vegetation work already completed at Big Rice Lake and the information gathered from sources that have completed similar vegetation enhancement projects, there is a high level of confidence that this project will be successful and will enhance 2,072 acres of wild rice habitat for waterfowl, as well as the recreational users, wild rice harvesters, and waterfowl hunters.

How does the request address MN habitats that have: historical value to fish and wildlife, wildlife species of greatest conservation need, MN County Biological Survey data, and/or rare, threatened and endangered species inventories:

Big Rice Lake is one of the largest shallow, wild rice lakes in northeastern Minnesota. The habitat present is dominated by pickerelweed which does not provide the migratory food source, brood rearing and nesting cover, or offer the diversity of other aquatic plants that a wild rice dominated habitat can provide. Enhancing wild rice will offer that critical habitat for resident and migratory waterfowl as well as other shorebirds and wetland favoring species. Based on observational information gathered from waterfowl hunters and wild rice harvesters from the years that rice was more abundant on Big Rice Lake, it was common to see many thousands of waterfowl utilizing the lake throughout the migration. Currently, since the habitat conditions have declined, very few waterfowl are observed during the fall migration.

Specific species of greatest conservation need listed in the Minnesota's Wildlife Action Plan 2015-2025 that will benefit from the habitat work proposed include lesser scaup, northern pintail, American black duck, common moorhen, least bittern, American bittern, marsh wren, Virginia rail, yellow rail, and trumpeter swan.

# Describe the science based planning and evaluation model used:

This proposal incorporates the need for habitat enhancement at a local and regional scale when evaluating the overall change in habitat quality as well as the involvement of recreational users and the vested interested by partnering agencies; targeting Big Rice Lake is not only science-based but also interest-based. Big Rice Lake is listed as a Priority Shallow Lake for focused management by the Shallow Lakes Program. Additionally, Big Rice is a Designated Wildlife Lake. The Big Rice Lake area has been identified as a Conservation Focus Area in Minnesota's Wildlife Action Plan which identifies areas of high diversity and key areas for conservation management. Big Rice Lake has had multiple aquatic plant surveys completed by various entities within the DNR including the Shallow Lakes Program, Fisheries, and County Biological Survey. Additional aquatic plant surveys have been completed by tribal agencies to assist with on-going monitoring of lake habitat conditions.

This proposal includes successful management techniques completed on Big Rice Lake at a smaller scale, as well as Rice Lake National Wildlife Refuge and on lakes within the Fond du Lac Reservation. Additionally, the work completed on Big Rice Lake in the past five years has been copied by other tribal agencies in Wisconsin to restore wild rice. There is little scientific literature available or research completed on specific actions related to vegetation management for wild rice enhancement in the northern forest. However, in order to implement this proposal, the best science available is being utilized. Big Rice Lake has the potential to provide 2072 acres of high quality aquatic habitat that is located in an area dominated by small lakes (<200 acres), winding rivers, and vast forested wetland complexes. Such a large wild rice lake is rare and can provide the needed habitat for resident and migratory waterfowl.

# Which sections of the Minnesota Statewide Conservation and Preservation Plan are applicable to this program:

- H4 Restore and protect shallow lakes
- H6 Protect and restore critical in-water habitat of lakes and streams

# Which other plans are addressed in this program:

- Long Range Duck Recovery Plan
- Managing Minnesota's Shallow Lakes for Waterfowl and Wildlife

#### Which LSOHC section priorities are addressed in this program:

#### **Northern Forest:**

 Protect shoreland and restore or enhance critical habitat on wild rice lakes, shallow lakes, cold water lakes, streams and rivers, and spawning areas

# Relationship to other funds:

Not Listed

## Does this program include leverage in funds:

Not Listed

Per MS 97A.056, Subd. 24, Any state agency or organization requesting a direct appropriation from the OHF must inform the LSOHC at the time of the request for funding is made, whether the request is supplanting or is a substitution for any previous funding that was not from a legacy fund and was used for the same purpose:

This request is not supplanting and is not a substitution for any previous funding that was not from a legacy fund and was used for the same purpose.

#### Describe the source and amount of non-OHF money spent for this work in the past:

Not Listed

# How will you sustain and/or maintain this work after the Outdoor Heritage Funds are expended:

Local DNR and tribal wildlife biologists will monitor the site to determine project outcomes. Future management of a well-established rice bed will include monitoring of the lake outlet to prevent obstructions such as beaver dams or fallen trees. Obstructions such as these will be removed to prevent rising water levels that can negatively impact wild rice. The equipment associated with this proposal will be essential to its long-term success since this project, specifically vegetation control, is predicted to require some small-scale maintenance for the foreseeable future until pickerelweed is no longer the dominant species. In addition to the required vegetation maintenance at Big Rice Lake, the acquired equipment would be available to address similar vegetation issues (pickerelweed, cattail, etc.) on wild rice lakes statewide.

#### Explain the things you will do in the future to maintain project outcomes:

| Year     | Source of Funds                        | Step 1                      | Step 2  | Step 3 |
|----------|--|-----------------------------|---|--------|
| Annually | DNR staff funding from various sources | monitor wild rice abundance | monitor lake outlet and remove obstructions as needed |        |

## **Activity Details:**

If funded, this program will meet all applicable criteria set forth in MS 97A.056 - Yes

Will there be planting of corn or any crop on OHF land purchased or restored in this program - No

Will restoration and enhancement work follow best management practices including MS 84.973 Pollinator Habitat Program - Yes

Is the activity on permanently protected land per 97A.056, subd 13(f), tribal lands, and/or public waters per MS 103G.005, Subd. 15 - Yes (Public Waters)

# **Accomplishment Timeline:**

| Activity  | Approximate Date Completed |
|---|----------------------------|
| Modify access to accomodate large equipment, modify lake outlet flow restrictions | July 2020                  |
| Vegetation control  | June 2023                  |
| Wild rice seeding   | September 2023             |

Date of Final Report Submission: 9/15/2024

# **Federal Funding:**

Do you anticipate federal funds as a match for this program - No

#### **Outcomes:**

#### Programs in the northern forest region:

• Improved availability and improved condition of habitats that have experienced substantial decline As noted in a 2008 report to the Minnesota legislature, "The future of natural wild rice in Minnesota will depend in large part on its protection and management by state and tribal natural resource agencies." Big Rice Lake has serious, but fixable issues. The proposed work for this lake will reestablish wild rice in a large, historically important wild rice lake. Success of the project will be readily apparent based on one measure - does wild rice become abundant in the project area. DNR and tribal biologists will monitor Big Rice Lake to evaluate wild rice abundance over time.

# **Budget Spreadsheet**

Budget reallocations up to 10% do not require an amendment to the Accomplishment Plan

How will this program accommodate the reduced appropriation recoomendation from the original proposed requested amount

Amount of capital equipment has been reduced. The reduced funding will result in treatment of 850 acres of the existing 1000 acres of pickerel weed. Future resources will be needed to address the remaining pickerel weed.

#### Total Amount of Request: \$845000

#### **Budget and Cash Leverage**

| BudgetName                 | LSOHC Request | Anticipated Leverage | Leverage Source | Total     |

Amount of Reguest: \$845,000

Amount of Leverage: \$0

Leverage as a percent of the Request: 0.00%

DSS + Personnel: \$168,000

As a % of the total request: 19.88%

How did you determine which portions of the Direct Support Services of your shared support services is direct to this program:

Direct Support Services is determined by a standard DNR process taking into account the amount of funding and the number of allocations made with that funding.

#### What is included in the contacts line?

Contract work includes: Fond du Lac harvester barge, airboat and operators; Bois Forte harvester barge and operator; contracted work to renovate the access ramp and move boulders to allow access by large equipment; contracted work at the outlet to remove the rock weir; wild rice seed evaluation to determine suitability.

### Does the amount in the travel line include equipment/vehicle rental? - Yes

#### Explain the amount in the travel line outside of traditional travel costs of mileage, food, and lodging:

Besides mileage, food, and lodging, the funding requested for Travel includes such items as fuel for a boat and anticipated maintenance for the airboats (a "fleet" expense in the DNR system).

#### Describe and explain leverage source and confirmation of funds:

How will this program accommodate the reduced appropriation recommendation from the original proposed requested amount?

Amount of capital equipment has been reduced. The reduced funding will result in treatment of 850 acres of the existing 1000 acres of pickerel weed. Future resources will be needed to address the remaining pickerel weed.
