Lessard-Sams Outdoor Heritage Council Fiscal Year 2021 / ML 2020 Request for Funding

Date: May 31, 2019

Program or Project Title: Enhanced Public Land - Grasslands - Phase IV

Funds Requested: \$5,008,200

Manager's Name: Alexander Nelson Title: MN Restoration Manager Organization: Pheasants Forever, Inc. Address: 1000 150th ave NW City: Spicer, MN 56288 Office Number: 320-292-6678 Mobile Number: 320-292-6678 Email: anelson@pheasantsforever.org Website: www.pheasantsforever.org

County Locations: Not Listed

Eco regions in which work will take place:

- Forest / Prairie Transition
- Prairie
- Metro / Urban

Activity types:

- Restore
- Enhance

Priority resources addressed by activity:

- Wetlands
- Prairie

Abstract:

14,000 acres of grassland and wetland habitat will be enhanced through this proposal to increase the productivity of game and nongame upland species on Minnesota lands open to public hunting including Wildlife Management Areas (WMA), Waterfowl Production Areas (WPA), and National Wildlife Refuges (NWR). We will accomplish this by working with our partners to follow best practices to conduct wetland restorations, conservation grazing, invasive tree removal, prescribed fire, and diversity seeding in the prairie, forest/prairie transition, and metro regions.

Design and scope of work:

According to the MN Prairie Conservation Plan, less than 2% of Minnesota's native prairie remains. Many of the remaining acres of native and restored prairie are degraded from lack of fire, low diversity and spread of invasive trees. There are wetlands in these landscapes that need be to restored and many previously restored basins that are in need of repair. This proposal aims to build on past investments to increase productivity on WPAs, WMAs, and NWRs that are open to hunting so they can reach their full potential for wildlife production.

Activities could include the following:

1) Wetlands will be restored/enhanced by removing drain tile, constructing/repairing earthen dams and/or water control structures, and invasive narrow leaf cattail control. Wetlands targeted for enhancement are vital to providing food, cover, and space required for breeding waterfowl and are essential to water quality and aquifer recharge.

2) A diverse mixture of native grasses and forbs is ideal for nesting and brood rearing of upland nesting birds and also essential for pollinator species. Many WMAs, WPAs, or NWRs were purchased in sub-optimal habitat condition (e.g. monotype of brome grass) or were restored using low diversity seed mixes that are less productive for wildlife. We will use a site-specific combination of techniques (e.g. cultivation, tree removal, herbicide, and prescribed fire) to bring back productivity to these public lands. In close collaboration

with the land managers, we will seed a diverse mix of native grasses and forbs that are well adapted to site conditions. Mowing will be used as needed to manage annual weed pressure to ensure establishment.

3) Prescribed burning is the primary tool for managing grassland habitat. It increases vigor, sets back invasive woody species, and removes built up residue.

4) Conservation grazing is an important enhancement tool for sites that are difficult to conduct prescribed fires or need to target specific enhancement needs (e.g. cool season grass suppression, tree invasion, etc.). Permanent infrastructure with a lifespan of 30+ years will be installed to conduct conservation grazing plans written to benefit wildlife.

5) Research has shown that invasive trees are detrimental to prairie/grassland wildlife and will be removed with this proposal. These trees reduce nesting success and provide perches and dens for predators. These predators are highly effective at predating both nests and nesting birds, especially in fragmented low quality habitat.

By creating the best possible habitat on WPAs, NWRs and WMAs, we will strive to help our public land management entities by reducing future investments for management.

A RFP and ranking process has been developed in previous phases that allow us to identify, rank and deliver the projects that have the most impact for grassland and wetland wildlife.

Which sections of the Minnesota Statewide Conservation and Preservation Plan are applicable to this project:

- H3 Improve connectivity and access to recreation
- H5 Restore land, wetlands and wetland-associated watersheds

Which other plans are addressed in this proposal:

- Long Range Plan for the Ring-Necked Pheasant in MN
- Minnesota Prairie Conservation Plan

Describe how your program will advance the indicators identified in the plans selected:

Minnesota Prairie Conservation Plan (MPCP) - This proposal fulfills many goals of the MPCP. It increases the rate of restoration and enhancement on public lands that directly contributes to the goals of public land enhancement in cores, corridors, and agriculture matrix.

Long Range Plan For the Ring-necked Pheasant in MN -This proposal increases the productivity of WMAs, WPAs, and NWRs open to hunting which will contribute to achieving an average ring-necked pheasant harvest of 750,000 birds by 2025.

Which LSOHC section priorities are addressed in this proposal:

Prairie:

• Restore or enhance habitat on public lands

Forest / Prairie Transition:

• Protect, enhance, and restore migratory habitat for waterfowl and related species, so as to increase migratory and breeding success

Metro / Urban:

• Protect, enhance, and restore remnant native prairie, Big Woods forests, and oak savanna with an emphasis on areas with high biological diversity

Describe how your program will produce and demonstrate a significant and permanent conservation legacy and/or outcomes for fish, game, and wildlife as indicated in the LSOHC priorities:

This proposal significantly increases the quality of habitat for game birds and other wildlife on public lands in the prairie, forest/prairie transition, and metro regions. These efforts provide increased opportunities for the public and improve the quality of the experience on our public lands for all users.

Describe how the proposal uses science-based targeting that leverages or expands corridors and complexes, reduces fragmentation or protects areas identified in the MN County Biological Survey:

The science and strategy of habitat enhancement in this part of Minnesota is to build functional complexes of habitat where it once existed. The quantity and spatial arrangement of habitat is important. Another important aspect relates to the quality of habitat found

there. By enhancing and restoring grasslands and wetlands in key landscapes, we aim to make every acre as productive as possible to provide the most benefit to wildlife and the people of Minnesota. To maximize efficiency and effectiveness, projects will be developed in conjunction with MNDNR and USFWS land managers.

How does the proposal address habitats that have significant value for wildlife species of greatest conservation need, and/or threatened or endangered species, and list targeted species:

This project directly addresses the loss of quality habitat on reconstructed and native prairies through restoration and enhancement best practices. By increasing the quality of existing remnant and reconstructed prairie habitat we benefit numerous species that are of special concern, threatened, or endangered. This proposal targets grassland species, including but not limited to, greater prairie chickens, ring-necked pheasants, monarch butterflies, honey bees and dakota skippers.

Identify indicator species and associated quantities this habitat will typically support:

Pheasant: By looking at the ratios of CRP acres in Minnesota to pheasant harvest, we can estimate that every three acres of grassland habitat has the potential to produce one harvested pheasant rooster.

Prairie Chickens: According to the research literature and personal observations in Minnesota, prairie chickens require a minimum of 320 acres of high quality grasslands with no areas hostile to grassland wildlife (woodlots, farmsteads, etc) near these grasslands. For every 320 acre patch of high quality grassland in the prairie chicken range in the northwest part of the state, we can expect there to be a lek, or booming ground. The average size of booming grounds in Minnesota is roughly 11 males.

Bobolink and Grasshopper Sparrow: The breeding territory size of bobolinks and grasshopper sparrows is 1.7 and 2.1 acres respectively in high quality habitat in Wisconsin. If all of the habitat was occupied, a 100 acres of habitat could potentially hold approximately 60 and 48 pairs of bobolinks and grasshopper sparrows respectively.

Monarch Butterfly: Research from the University of Minnesota has shown that it takes approximately 30 milkweed plants to result in one monarch butterfly contributing to the overwintering Mexican population. Grasslands can have between 100-250 milkweed stems per acre. An acre of restored or enhanced grassland could potentially contribute 3 to 8 monarchs to the population.

Outcomes:

Programs in forest-prairie transition region:

• Increased waterfowl and upland bird migratory and breeding success Outcomes will be measured by resource professionals and evaluated by using the best science available to land managers.

Programs in metropolitan urbanizing region:

• Improved condition of habitat on public lands. Outcomes will be measured by resource professionals and evaluated by using the best science available to land managers.

Programs in prairie region:

• Improved condition of habitat on public lands Outcomes will be measured by resource professionals and evaluated by using the best science available to land managers.

How will you sustain and/or maintain this work after the Outdoor Heritage Funds are expended:

The portions of enhancement work that will be completed by this proposal will generally allow the unit to be managed more effectively by the resource manager, whether that be the USFWS or the MNDNR. However, with limited funds and constant pressure to our public land grasslands/wetlands from volunteer invasive trees, water quality decline, aging grasslands, etc., we also expect continued opportunity to supplement local agency efforts. While it's difficult for a third party like us to provide an analysis of future costs on existing public land, according to the Long-Range Budget Analysis of Land Management Needs, the cost of long-term management ranges from \$11-16/acre annually. We expect that average need to be the same for the parcels we worked on.

Explain the things you will do in the future to maintain project outcomes:

Year	Source of Funds	Step 1	Step 2	Step 3
Post Project Completion - WMA	MN DNR - Game and Fish Funds	Monitoring	Maintenance	
Post Project Completion - WPA	USFWS - Federal	Monitoring	Maintenance	
Post Project Completion - NWR	USFWS-Federal	Monitoring	Maintenance	

What is the degree of timing/opportunistic urgency and why it is necessary to spend public money for this work as soon as possible:

Grasslands naturally degrade over time. The longer grasslands are allowed to degrade the more expensive and difficult they are to correct. This project aims to enhance public lands to produce at maximum capacity for the benefit of the public and as such is worthy and necessary for public money.

Does this program include leverage in funds:

Yes

This proposal is the fourth phase of an effort to enhance public lands for the benefit of wildlife and public recreation. All funding has been spent in the first phase and the second phase has a few final projects to complete. Phase III is 100% obligated and work is progressing as planned. Although we have accomplished a significant amount of quality work in previous phases, it is evident there is a significant amount of work remaining and an interest from agency managers to better our public lands. Pheasants Forever, USFWS, MN DNR and other partners are focused on managing grassland habitat for game birds, waterfowl, and all other species of grassland wildlife. Leverage is expected from multiple sources including but not limited to federal sources, contractor donations and PF.

Relationship to other funds:

• Not Listed

Describe the relationship of the funds:

Not Listed

Per MS 97A.056, Subd. 24, Any state agency or organization requesting a direct appropriation from the OHF must inform the LSOHC at the time of the request for funding is made, whether the request is supplanting or is a substitution for any previous funding that was not from a legacy fund and was used for the same purpose:

This proposal supplements past investments and is aimed at accelerating the existing enhancement and restoration of strategic public lands.

Describe the source and amount of non-OHF money spent for this work in the past:

Appropriation Year	Source	Amount
2002-2010	Heritage Enhancement Grants	\$145,000 HE / \$14,500 PF
2015-2017	NAWCA	\$150,000 HE

Activity Details

Requirements:

If funded, this proposal will meet all applicable criteria set forth in MS 97A.056 - Yes

Will restoration and enhancement work follow best management practices including MS 84.973 Pollinator Habitat Program - Yes

Is the restoration and enhancement activity on permanently protected land per 97A.056, subd 13(f), tribal lands, and/or public waters per MS 103G.005, Subd. 15 - Yes (WMA, WPA, Refuge Lands)

Do you anticipate federal funds as a match for this program - Yes

Are the funds confirmed - No

What is the approximate date you anticipate receiving confirmation of the federal funds - 07/01/2020

Land Use:

Will there be planting of corn or any crop on OHF land purchased or restored in this program - No

Accomplishment Timeline

Activity	Approximate Date Completed
Distribute Project Request for Proposals to Area Land Managers	Fall 2020
Review Project RFPs with project selection committee	Winter 2020-21
Select Projects for completion and hire contractors to complete habitat work	Winter 2020-21
Enhancement / Restoration work begins	Spring 2021
Re-evaluate project status/budget and solicit additional projects as needed	Winter 2021
Enhancement / Restoration work completed	Summer 2025

Leverage as a percent of the Request	3.00%
DSS + Personnel:	\$348,200
As a % of the total request:	6.95%
Easement Stewardship:	\$0
As a % of the Easement Acquisition:	-%

How did you determine which portions of the Direct Support Services of your shared support services is direct to this program:

PF utilizes the Total Modified Direct Cost method. This methodology is annually approved by the U.S. Department of Interior's National Business Center as the basis for the organization's Indirect Cost Rate agreement. PF's allowable direct support services cost is 4.12%. In this proposal, PF has discounted its rate to 2.0% of the sum of personnel, contracts, and travel. We are donating the difference in-kind.

What is included in the contracts line?

We anticipate that all of the contract funding will be used for restoration and enhancement activities.

Does the amount in the travel line include equipment/vehicle rental? - No

Explain the amount in the travel line outside of traditional travel costs of mileage, food, and lodging:

n/a

Describe and explain leverage source and confirmation of funds:

Leverage is expected from multiple sources including, but not limited to, federal sources, land value donations, contractor donations and PF. Not every source is 100% confirmed at this point. However, PF has an exemplary track record of delivery and over-achievement

of match commitments that further stretch OHF funding.

Does this proposal have the ability to be scalable? - Yes

Tell us how this project would be scaled and how administrative costs are affected, describe the "economy of scale" and how outputs would change with reduced funding, if applicable:

If scaled back, this proposal would be reduced proportionately across all categories of the budget and output tables.

0

I have read and understand Section 15 of the Constitution of the State of Minnesota, Minnesota Statute 97A.056, and the Call for Funding Request. I certify I am authorized to submit this proposal and to the best of my knowledge the information provided is true and accurate.

Parcel List

Explain the process used to select, rank and prioritize the parcels:

A request for proposals will be sent to all land managers within the prairie, prairie/forest transition, and metro regions. Submitted projects will be reviewed for eligibility, and ranked by a selection committee that will consist of staff from USFWS, MN DNR, and PF.

Section 1 - Restore / Enhance Parcel List

No parcels with an activity type restore or enhance.

Section 2 - Protect Parcel List

No parcels with an activity type protect.

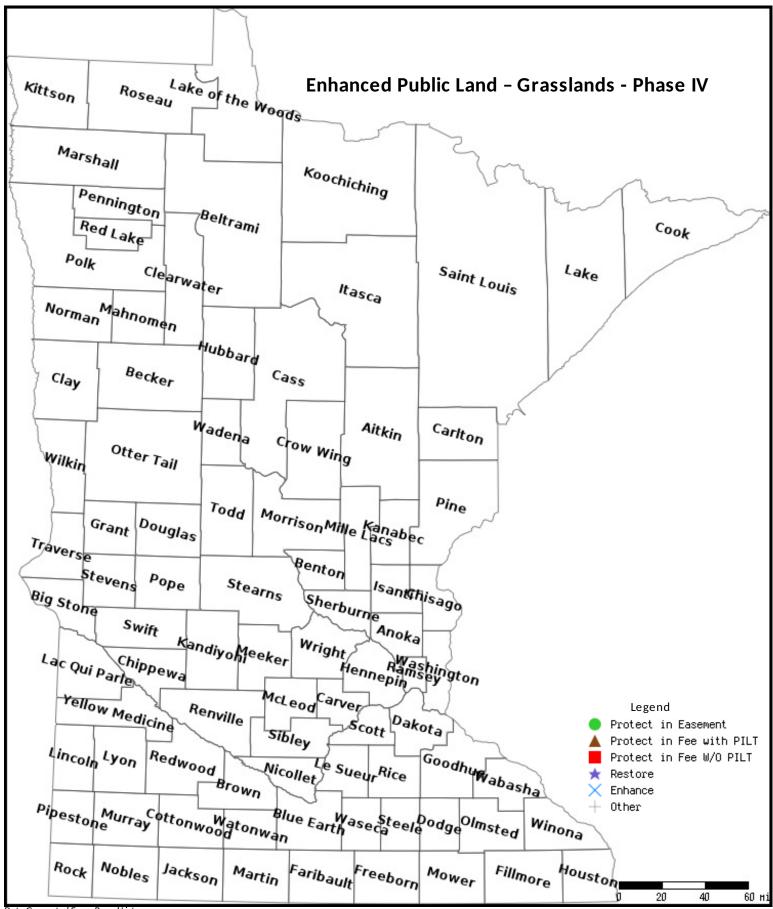

Section 2a - Protect Parcel with Bldgs

No parcels with an activity type protect and has buildings.

Section 3 - Other Parcel Activity

No parcels with an other activity type.

Parcel Map

Data Generated From Parcel List

Enhanced Public Lands Grasslands: Phase IV

Fig.1 Map shows all projects completed on public lands open hunting in Phases One (Green) and Two (Yellow) of this programs, as well as all accepted applications in Phase Three (Red). The Enhanced Public Lands-Grasslands program benefits numerous grassland dependent species by partnering with MN Department of Natural Resources and the US Fish and Wildlife Service to enhance habitat on public lands open to hunting in the prairie, prairie/forest transition, and metro regions. Work is completed by hiring local, private contractors using a competitive bid processes.
