

# Lessard-Sams Outdoor Heritage Council

## Laws of Minnesota 2011 Accomplishment Plan

**Date:** February 03, 2016

**Program or Project Title:** Accelerated Aquatic Management Area Habitat Program, Phase III

**Funds Recommended:** \$ 6,500,000

**Manager's Name:** Brian Nerbonne

**Organization:** DNR

**Address:** 500 Lafayette Road

**City:** Saint Paul, 55155

**Office Number:** 6512595205

**Fax Number:** 6512974916

**Email:** brian.nerbonne@state.mn.us

**Legislative Citation:** ML 2011, First Sp. Session, Ch. 6, Art. 1, Sec. 2, Subd. 5(a)

**Appropriation Language:** \$6,500,000 the first year is to the commissioner of natural resources to acquire interests in land in fee or permanent conservation easements for aquatic management areas under Minnesota Statutes, sections 86A.05, subdivision 14, and 97C.02, to restore and enhance aquatic habitat. A list of proposed acquisitions and stream and lake habitat restorations and enhancements must be provided as part of the required accomplishment plan. The accomplishment plan must include an easement monitoring and enforcement plan.

**County Locations:** Aitkin, Becker, Beltrami, Benton, Big Stone, Blue Earth, Brown, Carver, Cass, Chippewa, Chisago, Clay, Cook, Cottonwood, Crow Wing, Dakota, Douglas, Fairbault, Fillmore, Goodhue, Houston, Hubbard, Itasca, Jackson, Kanabec, Kandiyohi, Lake, LeSueur, Lincoln, Martin, Meeker, Morrison, Mower, Murray, Olmsted, Otter Tail, Redwood, Renville, Rice, Scott, Stearns, Stevens, St. Louis, Swift, Todd, Wabasha, Washington, Wilkin, Winona, and Wright.

### Regions in which work will take place:

- Forest / Prairie Transition
- Metro / Urban
- Northern Forest
- Prairie
- Southeast Forest

### Activity types:

- Enhance
- Protect in Easement
- Protect in Fee
- Restore

### Priority resources addressed by activity:

- Habitat

### Abstract:

We will use a programmatic approach to achieve prioritized aquatic habitat protection and enhancement for lakes, trout streams, and rivers across all LSOHC planning regions of Minnesota.

### Design and scope of work:

Problem to be addressed

Minnesota's aquatic habitats have been degraded or threatened by a century or more of land, hydrology, and human settlement related alterations. As of 2001, Minnesota has lost an estimated 20-28% of the emergent and floating leaf aquatic vegetation – just one type of essential fish habitat – from our lakes, while agricultural drainage and urban stormwater discharges have had devastating effects on natural in-stream habitat and hydraulic function over large portions of the state's river and stream miles. This loss or alteration to native aquatic habitats along our lakes, rivers, and streams rivals the statewide loss of wetland habitats that have so adversely affected our waterfowl production and hunting heritage. For lakes in particular, loss or alteration of native near-shore habitats in large regions of our state exceeds the historic loss of native prairie habitat.

The combined effects from direct alteration of nearshore physical habitat and watershed-scale land use impacts to water quality habitat have compromised the resiliency of our state's aquatic systems. The consequences to aquatic species have been reduced habitats for essential life history stages, lack of access to traditional spawning areas, and fragmentation of formerly continuous habitat that served as corridors to facilitate seasonal movements.

In a recent series of articles entitled "Losing Our Lakes" the Minneapolis Star Tribune highlighted a few case examples of both urban and lakeshore development and their degrading effect on Minnesota's lakes. The underlying conclusion of the series was that Minnesota's current development trajectory is not only unsustainable, but it is tremendously costly and difficult (if not uncertain) to undo the ecological damage to our prized aquatic resources from short-sighted development choices. The articles have left some Minnesotans angry, frustrated, or even hopeless about the future of their common heritage.

Yet this is not the first time a story like this has been told. Dennis Anderson's four-part series, "The State We're In," published by the Star Tribune nearly a decade previous highlighted a century's worth of aquatic habitat degradation that has occurred throughout the Land of 10,000 Lakes. The Anderson series stirred Minnesotans' consciousness, stimulated debate between the conservation community and policy makers, and perhaps germinated the seed leading to historic passage of the Clean Water, Land and Legacy Amendment. But it did not change what was happening on the land and in the water across Minnesota. The ensuing decade since the Anderson series was published only saw an accelerated pace of aquatic habitat degradation as the real estate bubble continued to grow and the now retiring baby-boomer generation increasingly bought up and developed their own piece of Minnesota's lake heritage. Transportation infrastructure improved to more rapidly deliver Minnesotans from their homes in metropolitan areas to lakes country and the north woods in pursuit of vacation and recreation. The increased convenience of access to lakes country fueled development of seasonal homes and with them, removal of riparian habitats and the destruction and disturbance of nearshore, shallow water habitats by docks, sand blankets, and recreational boating activities. Federal farm policy continued to underfund conservation programs while emerging biofuel energy initiatives indirectly encouraged the conversion of existing conservation lands back into row-crop production. In short, the decision-making shortcomings highlighted by the Star Tribune "Losing Our Lakes" series are only a symptom of much greater economic and social drivers adversely affecting aquatic habitats throughout Minnesota.

#### Urgency and opportunity

Protection of habitat is the single most cost-effective strategy to ensure future sustainability of aquatic ecosystems. Already, about one-third of lakeshore across the state is in some form of protected status, mostly through public ownership (federal, state, or county), and reasonably assured of providing quality aquatic habitat. Yet existing aquatic habitat protection is not uniformly distributed across the state. Regionally, the average proportion of lakeshore in public ownership (i.e., long-term protection status) ranges from over 75% in the Arrowhead region of the state to less than 5% in the LSOHC Forest/Prairie Transition Section and less than 1% in the Prairie Section of the state<sup>1</sup>. For the Metropolitan Urbanizing Section, over 97% of lakeshore is in private ownership and already in some form of intensive residential or urbanized development. Remnant high-quality lakeshore habitat is under increasing development pressure and especially so in the northern metropolitan counties and up through the north-central region of the state where the State Demographer's Office predicts future population growth will exceed 24% over the next two decades. Therefore, targeted protection of critical aquatic habitats is paramount to preserve essential ecological functions for aquatic species that support the multi-billion dollar water-based fishing/hunting/boating recreational economy of our state.

But protection by itself is not enough to ensure the future sustainability of aquatic species and our co-dependent recreation economy. We must build back much of the habitat that has been lost already. Scientific studies from throughout the Midwest have shown that shoreline development negatively impacts the quantity and quality of aquatic habitat. For the Metropolitan Urbanizing Section, over 97% of lakeshore is in private ownership and already in some form of intensive residential or urbanized development. Remnant high-quality lakeshore habitat is under increasing development pressure and especially so in the northern metropolitan counties and up through the north-central region of the state where the State Demographer's Office predicts future population growth will exceed 24% over the next two decades. Therefore, targeted protection of critical aquatic habitats is paramount to preserve essential ecological functions for aquatic species that support the multi-billion dollar water-based fishing/hunting/boating recreational economy of our state.

But protection by itself is not enough to ensure the future sustainability of aquatic species and our co-dependent recreation economy. We must build back much of the habitat that has been lost already. Scientific studies from throughout the Midwest have shown that shoreline development negatively impacts the quantity and quality of aquatic habitat. DNR research on spawning site selection by bass and crappie indicates that these species avoid developed shoreline for spawning even when suitable in-lake habitat is present there. Further, a Michigan study of bass nesting found reduced nesting success and fry production associated with developed shorelines in comparison to undeveloped areas of the same lake. Numerous studies in Wisconsin have shown a simplification of vegetation and

woody habitat and declines in important non-game species like frogs and neo-tropical songbirds correlated with development of shorelines. And finally, preliminary results of on-going academic research funded by DNR through a federal SWAP grant is showing strong association of longear sunfish, a species of greatest conservation need (SGCN), with aquatic habitat fragments along developed shorelines, indicating, in contrast to game species research, the ability of some non-game species to utilize small remnant patches of habitat (preserved or restored). Given the extent of existing shoreline development over vast portions of our state, habitat enhancement along developed shorelines is critical to ensure the long-term sustainability of recreational fishing and the forage species on which game fish depend. Therefore, pulling back human activities from the immediate shoreline area by use of native vegetated buffers, enhancing remnant patches of shoreline and nearshore habitat, and concentrating human activity to narrow access corridors at the shore-lake interface are collectively seen as a key strategy to overcome the adverse impacts of human shoreline development on game and non-game aquatic species.

The challenges are large but the current economic downturn creates a significant opportunity to deliver aquatic habitat conservation. Real estate prices have moderated and provide good conservation value for fee title and conservation easement acquisitions. The state's construction workforce is more available for conservation restoration and enhancement projects following the decline of new start-ups in the building sector. Federal economic stimulus funding is being directed at major aquatic landscapes that include Minnesota such as the Great Lakes and the Mississippi River Basin and thereby represents an opportunity to leverage significant federal dollars. Federal legislation (the National Fish Habitat Conservation Act) is currently pending in Congress that would direct an additional \$75 million annually toward aquatic habitat protection, restoration, and enhancement work nationwide. These are certainly hard times but there is also a tremendous window of opportunity to create a conservation legacy for future generations much like was achieved 80 years ago.

#### Scope of the work

Against this backdrop, DNR has a diverse infrastructure of habitat programs that provide a meaningful framework for delivering habitat protection, restoration, and enhancement throughout the state. We will use a comprehensive, programmatic approach to achieve prioritized aquatic habitat protection and enhancement for lakes, trout streams, and rivers across Minnesota. We propose to: i) protect nearly 28 miles of shoreline on lakes, rivers and trout streams; ii) enhance 16.1 miles of shoreline habitat on DNR-owned Aquatic Management Areas; iii) effect structural repair and modification to 1 dam that will integrate fish passage and restore connectivity to over 10 upstream river miles; and iv) enhance stream channel function and in-stream physical habitat that will benefit 3.2 miles of trout stream. The strategic approach and priority resources targeted in this proposal are supported by a number of internal and external conservation planning documents. The DNR will implement the objectives of this proposal through established and highly successful programs each having strong stakeholder support including: Aquatic Management Area Program, Shoreland Habitat Program, and Coldwater Streams Program.

How will this directly relate to restoring, protecting, or enhancing habitat? Why will this strategy work?

Acquisition of priority habitats provides permanent protection backed by state and federal laws. The AMA designation unit within the Outdoor Recreation System was established by the Legislature in 1992 and has strong support from conservation groups and anglers. The AMA Program currently has an inventory of 830 miles of shoreline in over 330 AMAs, which provide permanent protection of critical riparian habitats, perpetuate fish and wildlife populations, safeguard water quality, and offer public recreational access opportunities as an important additional benefit.

Shoreline enhancement work is based on proven methods and DNR experience with multiple projects. By drawing on accumulated scientific knowledge, DNR strives to deliver the best possible enhancement projects using the best available science. The DNR Shoreland Habitat Program was developed to address the strategic need for habitat enhancement along developed shoreline and has conducted shoreline enhancement projects for over 10 years. During that time the program has grown in scope and popularity and enhanced over 21 miles of shoreline on lakes across the state including many challenging high erosion sites. The annual number of shoreland enhancement projects completed has increased from 23 in 2002 to 60 in 2009. Native plants and natural materials are utilized to increase habitat complexity, provide protective cover, stabilize shorelines, and firmly anchor soils. These shoreline enhancement projects now provide erosion protection, in-lake and upland habitat diversity benefitting multiple species of fish and wildlife (both game species and SGCNs), and enhanced aesthetics. Further habitat benefits will continue to accrue as project sites mature and the shoreline assumes a more natural character.

The DNR has an established history of conducting trout stream enhancement projects. Stream enhancement projects reconstruct the stream's natural pattern, profile, and dimension and address the key components of a stream: wildlife and fish habitat, water quality, connectivity to the floodplain and upstream reaches, and hydrology. Natural stream design favors hydrologic conditions that do not degrade the stream bank or bed and provides a diversity of microhabitats that are more favorable to fish and other aquatic species.

#### Parcel selection and scoring process

To achieve the program goals of this proposal, DNR will implement AMA acquisition projects from existing prioritized lists. Natural resource plans provide much of the criteria for prioritizing habitat protection, restoration, and enhancement activities. For example, AMA acquisition projects are scored based on a suite of criteria ranging from scope of project and quality of resource benefited to project readiness and feasibility. The sum of these scores creates a ranking value from which to prioritize among the many available project opportunities. See pp. 40-41 of AMA Plan for example of scoring criteria.

Other projects are more opportunity driven such as lakeshore habitat enhancement where the needs are ubiquitous. Priorities are then based upon willing landowners, capable partners, and magnitude of the project or benefit to the resource. Projects that enhance a sizeable length of shoreline, reconnect access to many miles of formerly severed stream, or build upon previous projects within a habitat complex are examples of prioritization considerations. For purposes of this grant, however, shoreline enhancement projects will focus on currently identified needs within DNR-owned Aquatic Management Area lands.

Level of stakeholder opposition to and involvement in this proposal.

DNR has held face-to-face coordination discussions with several of our conservation partners and stakeholders about the elements of this proposal. They are informed of the aquatic habitat activities contained here and are supportive of our proposed approach.

From these discussions, it is clear that we have some priority project sites in common and we have coordinated which party will take the lead in implementing projects funded by the Council. In addition to this formal coordination with partners, we have engaged partners and stakeholders in our aquatic conservation planning. The AMA Acquisition Planning Committee developed an acquisition plan in 2007 that recommended purchasing an additional 2,595 miles of riparian lands over 25 years to meet the habitat protection needs of a rapidly changing Minnesota. This stakeholder-developed plan guides DNR's AMA program implementation.

Protection and enhancement elements of this proposal also are linked to other landscape or system-specific management plans (e.g., the Southeast MN coldwater stream plan) that have been developed through extensive internal and external coordination. These elements represent shared priorities with multiple partners and stakeholders.

## Crops:

Will there be planting of corn or any crop on OHF land purchased or restored in this program - **Not Listed**

## Which sections of the Minnesota Statewide Conservation and Preservation Plan are applicable to this project:

- H1 Protect priority land habitats
- H6 Protect and restore critical in-water habitat of lakes and streams

## Which other plans are addressed in this proposal:

- Midwest Glacial Lakes Partnership
- Minnesota DNR AMA Acquisition Plan
- Minnesota DNR Strategic Conservation Agenda
- National Fish Habitat Action Plan
- Red River of the North Fisheries Management Plan
- Strategic Plan for Coldwater Resources Management in Southeastern Minnesota
- Tomorrow's Habitat for the Wild and Rare
- U.S. Fish and Wildlife Service Strategic Habitat Conservation Model
- Individual Lake and Stream Management Plans

## Which LSOHC state-wide priorities are addressed in this proposal:

- Not Listed

## Which LSOHC section priorities are addressed in this proposal:

### Forest / Prairie Transition:

- Protect, enhance, and restore wild rice wetlands, shallow lakes, wetland/grassland complexes, aspen parklands, and shoreland that provide critical habitat for game and nongame wildlife

### Metro / Urban:

- Enhance and restore coldwater fisheries systems
- Protect, enhance, and restore riparian and littoral habitats on lakes to benefit game and nongame fish species

### Northern Forest:

- Not Listed

#### **Prairie:**

- Not Listed

#### **Southeast Forest:**

- Not Listed

### **Relationship to other funds:**

- Not Listed

### **How does this proposal accelerate or supplement your current efforts in this area:**

This program funding will be supplemental to traditional funding sources, and is of reasonable size given the scale of DNR's recent fiscal year expenditures. Though Outdoor Heritage Funds would be spread out over multiple years, below are approximate Fiscal Year 2009 expenditures (not including Bonding) as an example of what DNR spends in a given year: Fiscal Year 2009 Approximate Expenditures, not including Bonding funds, were:

DNR - \$200 million

Ecological Resources Division - \$11.6 million

Fish and Wildlife Division - \$33.1 million

Forestry Division - \$25.5 million

Waters Division - \$33.4 million

This proposal represents slightly less than 9% of the DNR's FY09 expenditures from traditional funding sources.

The program activities included in this proposal are above and beyond program activity funded through DNR base budget appropriations. In addition to legislative appropriations from Game and Fish Fund and capital bonding, the Department actively pursues other funding from a variety of sources including LCCMR, federal grants and private foundation grants to achieve aquatic habitat program outcomes. These alternative sources of funding are less certain or predictable and, thus, are not part of the Department's base budget.

### **How will you sustain and/or maintain this work after the Outdoor Heritage Funds are expended:**

AMA acquisitions will be sustained through fee title ownership and perpetual easements held by the DNR. This is a long-term protection strategy. Long-term stewardship of fee title AMA lands is achieved through periodic and recurring monitoring of the property and boundaries by DNR staff for encroachment from adjoining property owners or for habitat management needs. Easement AMA lands, especially trout stream easements, additionally benefit from informal monitoring by the angling public and agency conservation partners.

Trout stream enhancement activities are designed to work with natural hydrology of the flowing systems so as to be durable and self-maintaining over time. Restoring natural channel function or mimicking natural riffles/rapids results in the desired habitat benefit but also provides perpetual self-maintenance.

Maintenance of lakeshore enhancement activities will be included as part of the project plan, and the organizations contracted to do the enhancement work will also be contracted to complete the necessary maintenance of the enhanced sites, directed by input from DNR staff on the types of maintenance that will be completed. Supplemental vegetation planting, watering of the enhancement site and removal of invasive plant species are typical maintenance requirements during the early stages of enhancement projects. Typically if a project is implemented and maintained for a 10-year period, the critical maintenance has been completed and long-term project success is likely.

#### **Cost, schedule, and sources of funding**

Future funding for DNR is determined by legislative appropriation therefore sources of funding cannot be adequately forecasted beyond the current biennium, however, the following costs and schedule are anticipated to result from program activities highlighted in this proposal:

- AMA costs to develop acquired parcels (signage, parking, fencing, demolition and removal of structures, habitat manipulations, and similar needs) are included in this request for funding. Routine maintenance of AMA parcels will be accomplished by Area Fisheries Managers as part of their public land management responsibilities. Periodic enhancements such as invasive species removal,

prescribed burning, supplemental vegetation planting, shoreline stabilization and restoration, and similar activities will be accomplished through annual funding requests from a variety of funding sources including, but not limited to, Game and Fish Fund, Bonding, Gifts, Federal Sources, Environmental Trust Fund, and Outdoor Heritage Fund.

- Trout Stream Enhancements – Trout stream enhancement projects are designed to be self-maintaining and require no future investments.
- Shoreland Habitat Enhancement – Shoreland enhancement projects typically require routine maintenance over a 10-year period to ensure long-term success. This maintenance will be conducted by DNR staff and willing partners.
- Dam Repair/Enhancement – Dams will require periodic inspection and maintenance over time. Inspection is conducted by DNR field hydrologists according to established monitoring schedules. Routine maintenance may be required and will be accomplished through annual funding requests from a variety of funding sources including, but not limited to, Game and Fish Fund, Bonding, Gifts, Federal Sources, Environmental Trust Fund, and Outdoor Heritage Fund. The DNR presently has a backlog of dam maintenance needs statewide that are prioritized based on danger to life, damage to property, and other factors as established in Minnesota Statutes Chapter 103G.511, Subd. 12.

### Activity Details:

Will local government approval be sought prior to acquisition - **Yes**

Is the land you plan to acquire free of any other permanent protection - **Yes**

Is this land open for hunting and fishing - **Yes**

Not Listed

Will the eased land be open for public use - **Yes**

Not Listed

Is the land you plan to acquire free of any other permanent protection - **Yes**

Are there currently trails or roads on any of the acquisitions on the parcel list - **Not Listed**

Will new trails or roads be developed as a result of the OHF acquisition - **Not Listed**

Is the activity on permanently protected land per 97A.056, subd 13(f) and/or public waters per MS 103G.005, Subd. 15 - **Yes (AMA, Public Waters)**

### Accomplishment Timeline:

Activity	Approximate Date Completed
AMA Acquisition - Acquire priority fee title & easements - 16.8 miles	June 30, 2012
AMA Acquisition - Acquire priority fee title & easements - 8.4 miles	June 30, 2013
AMA Acquisition - Acquire priority fee title & easements - 2.8 miles	June 30, 2014
Trout Stream Enhancement - Enhanced 3.2 miles trout streams	June 30, 2015
Lake Habitat Enhancement - Refine list of shoreline projects on AMAs via annual budgeting process	Spring 2011
Lake Habitat Enhancement - Review lists and making funding determinations	August 2011
Lake Habitat Enhancement - Develop and approve plans	December 2011-March 2012
Lake Habitat Enhancement - Implement Plans	April 2012 - June 2014
Stream channel restoration - Buffalo River project construction	June 30, 2016

Date of Final Report Submission: 11/1/2016

### Federal Funding:

Do you anticipate federal funds as a match for this program - **No**

### Outcomes:

Programs in the northern forest region:

- Improved aquatic habitat indicators

Programs in forest-prairie transition region:

- Improved aquatic habitat indicators

**Programs in metropolitan urbanizing region:**

- Improved aquatic habitat indicators

**Programs in southeast forest region:**

- Improved aquatic habitat indicators

**Programs in prairie region:**

- Improved aquatic habitat indicators

# Budget Spreadsheet

Budget reallocations up to 10% do not require an amendment to the Accomplishment Plan

How will this program accommodate the reduced appropriation recommendation from the original proposed requested amount
