

Lessard-Sams Outdoor Heritage Council

ML 2022 Request for Funding

General Information

Date: 06/03/2021

Proposal Title: Accelerating the Wildlife Management Area Program - Phase XIV

Funds Requested: \$13,852,300

Manager Information

Manager's Name: Eran Sandquist

Title: MN State Coordinator

Organization: Pheasants Forever, Inc.

Address:

City: , MN

Email: esandquist@pheasantsforever.org

Office Number:

Mobile Number:

Fax Number:

Website: www.pheasantsforever.org

Location Information

County Location(s): Chippewa, Le Sueur, Rice, Lincoln, Nobles, Watonwan, Big Stone, Brown, Swift, Lyon, Rock, Martin, Meeker, Cottonwood, Jackson, Douglas, Dakota, Stearns, Sibley, Kandiyohi, Murray and Yellow Medicine.

Eco regions in which work will take place:

- Forest / Prairie Transition
- Prairie
- Metro / Urban

Activity types:

- Protect in Fee
- Restore

Priority resources addressed by activity:

- Wetlands
- Prairie

Narrative

Abstract

This proposal accelerates the protection and restoration of 2,290 acres of prairie grasslands, associated wetlands and other wildlife habitats as State Wildlife Management Areas (WMA) open to the public. Pheasants Forever (PF) will be permanently protecting parcels within the prairie, prairie/forest transition, and metro planning regions. These acquired properties will be restored to the highest quality wildlife habitat feasible and transferred to the MN Department of Natural Resources (MN DNR) to be included into the WMA system.

Design and Scope of Work

This proposal represents the fourteenth phase in Pheasants Forever's Accelerating the Wildlife Management Area program. This program continues to build upon past investments in long-term upland and wetland conservation. The proposal will protect and restore 2,290 acres of lands that will be managed for wildlife. The goals of this program specifically address goals outlined in the foundational documents for the Lessard-Sams Outdoor Heritage Council's recommendation process, including those outlined in the MN Statewide Conservation and Preservation Plan 2008, the MN Duck Action Plan 2020-2023, the MN Pheasant Action Plan 2020-2023 and the Minnesota Prairie Conservation Plan 2010, among others.

Parcels will be acquired from willing sellers and will be prioritized using criteria used by MN DNR (Minnesota Wildlife Management Areas – The Next 50 Years) which include location on the landscape, breeding waterfowl density, restoration potential, native community protection (e.g. Minnesota Biological Survey site), proximity to other investments in perpetually protected habitats. Projects were developed and selected in conjunction with local and regional DNR staff. All projects will meet standards and requirements for inclusion into the WMA system and DNR Commissioner approval will be received for any project funded under this proposal. In addition to meeting the minimum WMA standards, additional criteria are used to develop the potential project list including:

- 1) Does the parcel contain habitat restoration potential that will result in an increase in wildlife populations?
- 2) Does the parcel build upon existing investments in public and private land habitat (landscape scale significance)?
- 3) Does the parcel contain significant natural communities, or will it protect or buffer significant natural communities?
- 4) Does the parcel have the potential and focus for habitat protection and restoration in the future?
- 5) Does the parcel provide multiple benefits (recreation, access, water control, water quality, wellhead protection, riparian protection, local community support, etc.)?

Providing quality habitat and keeping future management concerns in mind, all acquisitions will be restored to the highest quality wildlife habitat feasible. Completing high-quality, comprehensive restorations, utilizing native species and best management practices, results in fewer management concerns and lower long-term costs. Acquired croplands will be permanently retired and restored to diverse grasslands and wetlands habitat, drained wetlands will be restored, and invasive trees will be removed when appropriate.

How does the proposal address habitats that have significant value for wildlife species of greatest conservation need, and/or threatened or endangered species, and list targeted species?

PF actively engages in conservation discussions with state and federal government agencies, to determine what areas are the highest priority for adding permanently protected lands in the prairie, prairie/forest transition, and metro planning areas. High priority is given to parcels whose restoration and protection benefit rare, threatened, & endangered species. Often the only locations where many threatened and endangered species are found is on existing habitat complexes. This program builds upon those complexes allowing for expansion and increased populations of those species.

When selecting projects for this proposal, PF uses the latest GIS data and works with DNR and USFWS staff to

identify locations that benefit species of greatest conservation need. Additionally, species of greatest conservation need are considered and can influence restoration plans after the land is permanently protected. By increasing the amount, functionality and productivity of grassland landscapes for these species, we aim to slow population decline. Restoration of wetland and grassland complexes will provide habitat for a myriad of species including waterfowl, shorebirds, bobolinks, meadowlarks, ring-necked pheasants, pollinators, and monarchs. Other species of concern benefiting from this project include the greater prairie chicken, short-eared owl, marsh hawk, and yellow rails.

What is the degree of timing/opportunistic urgency and why it is necessary to spend public money for this work as soon as possible?

The demand for public places for outdoor recreation has never been higher. During the Covid-19 pandemic, DNR and USFWS managers have reported greatly increased usage of public lands. Additionally, the declines in private land conservation acres such as those in CRP, make it incredibly important that permanently protected habitat be created in order to ensure wildlife populations can continue to thrive. Lastly, there is a backlog of landowners who are interested in selling their lands to become public wildlife habitat.

Describe how the proposal uses science-based targeting that leverages or expands corridors and complexes, reduces fragmentation or protects areas identified in the MN County Biological Survey:

This program uses numerous science-based conservation plans, all of which expand corridors and complexes, as well as conservation data to evaluate each potential acquisition and determine if it will provide significant habitat benefits. These plans and data sources include the MN County Biological Survey Biodiversity Significance data, MN Prairie Conservation Plan, MN Statewide Conservation and Preservation Plan 2008, the MN Duck Action Plan 2020-2023, the MN Pheasant Action Plan 2020-2023, USFWS' Duck Breeding Density data and the MN DNR Natural Heritage Information Systems data. Preference is given to properties that help improve habitat for identified species as well as deliver the goals of these recognized conservation plans.

Which two sections of the Minnesota Statewide Conservation and Preservation Plan are most applicable to this project?

- H1 Protect priority land habitats
- H5 Restore land, wetlands and wetland-associated watersheds

Which two other plans are addressed in this proposal?

- Minnesota Prairie Conservation Plan
- Minnesota's Wildlife Management Area Acquisition - The Next 50 Years

Describe how your program will advance the indicators identified in the plans selected:

This program directly contributes to the primary goal of each identified plan which is restoration and protection of additional wetland/grassland habitat complexes. The MN Prairie Conservation Plan's 25 year goal is to permanently protect, through fee title acquisition, 222,100 acres in core areas, 82,000 acres in corridors, and 547,300 acres elsewhere in the agricultural matrix. The MN WMA Acquisition 50-year plan is to identify and permanently protect 702,200 acres. This program will contribute to these goals.

Which LSOHC section priorities are addressed in this proposal?

Forest / Prairie Transition

- Protect, enhance, and restore wild rice wetlands, shallow lakes, wetland/grassland complexes, aspen parklands, and shoreland that provide critical habitat for game and nongame wildlife

Metro / Urban

- Protect, enhance, and restore remnant native prairie, Big Woods forests, and oak savanna with an emphasis on areas with high biological diversity

Prairie

- Protect, enhance, or restore existing wetland/upland complexes, or convert agricultural lands to new wetland/upland habitat complexes

Describe how your program will produce and demonstrate a significant and permanent conservation legacy and/or outcomes for fish, game, and wildlife as indicated in the LSOHC priorities:

The Accelerating Wildlife Management Area Program has already achieved landscape-level impacts in previous phases. By permanently protecting and restoring parcels as Wildlife Management Areas, this program is delivering meaningful results that protect wildlife habitat in perpetuity and opens them for public access. This Phase XIV proposal directly contributes an additional 2290 acres of protected and restored habitat.

What other fund may contribute to this proposal?

- N/A

Does this proposal include leveraged funding?

Yes

Explain the leverage:

This proposal will bring \$2,950,000 of leverage funds to increase accomplishments of acquisition and restoration activities. This leverage will come from Pheasants Forever and Federal funds, as well as private sources.

Per MS 97A.056, Subd. 24, Please explain whether the request is supplanting or is a substitution for any previous funding that was not from a legacy fund and was used for the same purpose.

This proposal supplements past investments and is aimed at accelerating the protection and restoration of strategic parcels.

Non-OHF Appropriations

Year	Source	Amount
Annual	PF	150,000

How will you sustain and/or maintain this work after the Outdoor Heritage Funds are expended?

All lands will be enrolled into the state Wildlife Management Area system and will be managed in perpetuity by the Minnesota DNR. All acquired lands will meet the minimum initial development standards for WMAs. All acquisitions will be restored to as high quality as practicable, with the knowledge that quality and comprehensive restorations utilizing native species result in lower management costs. In addition, our local PF chapter members and volunteers maintain a high interest in seeing the habitat and productivity of acquired parcels are at high-quality levels. PF and partners including the DNR and USFWS will develop an ecological restoration and management plan for each parcel. Grant and partner dollars will also be used for the initial site development and restoration/enhancement work.

Actions to Maintain Project Outcomes

Year	Source of Funds	Step 1	Step 2	Step 3
Post Transfer to MNDNR	MN DNR - Game and Fish Funds	Monitoring	Maintenance	Management

Identify indicator species and associated quantities this habitat will typically support:

Pheasant

By looking at the ratios of CRP acres in Minnesota to pheasant harvest, we can estimate that every three acres of grassland habitat has the potential to produce one harvested pheasant rooster.

Prairie Chickens

According to the research literature and personal observations in Minnesota, prairie chickens require a minimum of 320 acres of high quality grasslands with no areas hostile to grassland wildlife (woodlots, farmsteads, etc) near these grasslands. For every 320 acre patch of high quality grassland in the prairie chicken range in the northwest part of the state, we can expect there to be a lek, or booming ground. The average size of booming grounds in Minnesota is roughly 11 males.

Bobolink and Grasshopper Sparrow

The breeding territory size of bobolinks and grasshopper sparrows is 1.7 and 2.1 acres respectively in high quality habitat in Wisconsin. If all of the habitat was occupied, 100 acres of habitat could potentially hold approximately 60 and 48 pairs of bobolinks and grasshopper sparrows respectively.

Monarch Butterfly

Research from the University of Minnesota has shown that it takes approximately 30 milkweed plants to result in one monarch butterfly contributing to the overwintering Mexican population. Grasslands can have between 100-250 milkweed stems per acre. An acre of restored or enhanced grassland could potentially contribute 3 to 8 monarchs to the population.

How will the program directly involve, engage, and benefit BIPOC (Black, Indigenous, People of Color) and diverse communities:

The goals of this program are specifically designed to improve wildlife habitat and public spaces for the benefit of all people regardless of race. Additionally, Pheasants Forever is undertaking an organization wide initiative to design, develop and implement a foundational plan to increase the inclusion of BIPOC communities inside and outside of our organization, and to ensure there's a sense of belonging among all people within Pheasants Forever and Quail Forever.

Activity Details

Requirements

If funded, this proposal will meet all applicable criteria set forth in MS 97A.056?

Yes

Will county board or other local government approval be formally sought prior to acquisition, per 97A.056 subd 13(j)?**

No

Describe any measures to inform local governments of land acquisition under their jurisdiction:

At a minimum PF and/or MN DNR will notify local government in writing of the intent to acquire and donate lands to the state and follow up with questions prior to acquisition. In cases where there is interest,

we will also indicate our willingness to attend or ask to attend county or township meetings to communicate our interest in the projects and seek support.

Is the land you plan to acquire (fee title) free of any other permanent protection?

No

Describe the permanent protection and justification for additional protection:

A limited number of the parcels may have a federal or state easement on a portion of the tract which provides permanent protection for wetlands or grasslands. If a parcel has one of these encumbrances, and is still deemed a high priority by the partnership, we will follow guidance established by the Outdoor Heritage Fund to proceed, or use non-state funding to acquire the residual value of the protected portion of the property.

Will restoration and enhancement work follow best management practices including MS 84.973 Pollinator Habitat Program?

Yes

Is the restoration and enhancement activity on permanently protected land per 97A.056, Subd 13(f), tribal lands, and/or public waters per MS 103G.005, Subd. 15?

Yes

Where does the activity take place?

- WMA
- WPA
- Refuge Lands

Land Use

Will there be planting of any crop on OHF land purchased or restored in this program?

Yes

Explain what will be planted:

This proposal may include initial development plans or restoration plans to utilize farming to prepare previously farmed sites for native plant seeding. This is a standard practice across the Midwest to prepare the seedbed for native seed planting. In these restorations, PF's policy is to use non neonicotinoid treated seed and no herbicides other than glyphosate. On a small percentage of WMAs (less than 2.5%), DNR uses farming to provide a winter food source for a variety of wildlife species in agriculture-dominated landscapes largely devoid of winter food sources. There are no immediate plans to use farming for winter food on any of the parcels in this proposal.

Is this land currently open for hunting and fishing?

No

Will the land be open for hunting and fishing after completion?

Yes

Describe any variation from the State of Minnesota regulations:

No variation from State of Minnesota regulations.

Are there currently trails or roads on any of the proposed acquisitions?

No

Will new trails or roads be developed or improved as a result of the OHF acquisition?

No

Will the land that you acquire (fee or easement) be restored or enhanced within this proposal's funding and availability?

Yes

Other OHF Appropriation Awards**Have you received OHF dollars in the past through LSOHC?**

Yes

Leverage as a percent of the Request: 21.3%

DSS + Personnel: \$204,300

As a % of the total request: 1.47%

Easement Stewardship: -

As a % of the Easement Acquisition: -

Describe and explain leverage source and confirmation of funds:

Leverage is expected from multiple sources including but not limited to federal sources, land value donations, contractor donations and PF. Not every source is 100% confirmed at this point. However, PF has an exemplary track record of delivery and over-achievement of match commitments that further stretch OHF funding.

Does this proposal have the ability to be scalable?

Yes

If the project received 70% of the requested funding

Describe how the scaling would affect acres/activities and if not proportionately reduced, why?

If this project is reduced by 30% we would scale down all acres/activities and dollar amounts proportionately.

Describe how personnel and DSS expenses would be adjusted and if not proportionately reduced, why?

Personnel and DSS will be scaled down proportionately.

If the project received 50% of the requested funding

Describe how the scaling would affect acres/activities and if not proportionately reduced, why?

If this project is reduced by 50% we would scale down all acres/activities and dollar amounts proportionately.

Describe how personnel and DSS expenses would be adjusted and if not proportionately reduced, why?

Personnel and DSS will be scaled down proportionately.

Personnel

Has funding for these positions been requested in the past?

Yes

Please explain the overlap of past and future staffing and position levels previously received and how that is coordinated over multiple years?

In general PF staffing is existing and only partially funded by OHF and specifically this request. Billing to any appropriation would only be for time spent on direct and necessary costs incurred as outlined in an Accomplishment Plan.

Contracts

What is included in the contracts line?

We anticipate that all of the contract funding will be used for restoration, enhancement, and initial development of the protected acres and \$30,000 for adjacent protected lands. This could include but is not limited to wetland/grassland restoration, tree removal, prescribed fire, building removal, posts, signs, and other development.

Fee Acquisition

What is the anticipated number of fee title acquisition transactions?

We anticipate 17 fee title acquisition transactions

Travel

Does the amount in the travel line include equipment/vehicle rental?

No

Explain the amount in the travel line outside of traditional travel costs of mileage, food, and lodging

n/a

I understand and agree that lodging, meals, and mileage must comply with the current MMB Commissioner Plan:

Yes

Direct Support Services

How did you determine which portions of the Direct Support Services of your shared support services is direct to this program?

PF utilizes the Total Modified Direct Cost method. This methodology is annually approved by the U.S. Department of Interior's National Business Center as the basis for the organization's Indirect Cost Rate Agreement. PF's allowable direct support services cost is 4.84%. In this proposal, PF has discounted its rate to 2.5% of the sum of personnel, contracts, professional services, and travel. We are donating the difference-in-kind.

Federal Funds

Do you anticipate federal funds as a match for this program?

Yes

Are the funds confirmed?

No

What is the approximate date you anticipate receiving confirmation of the federal funds?

07/01/2023

Target Lake/Stream/River Feet or Miles

Outcomes

Programs in forest-prairie transition region:

- Protected, restored, and enhanced nesting and migratory habitat for waterfowl, upland birds, and species of greatest conservation need ~ *Parcels that increase the functionality of existing habitat will be acquired and restored to functioning wetlands with diverse upland prairie to serve as habitat for pollinators, resident and migratory game and non-game species. Lands will be transferred to the state as a WMA to provide accelerated wildlife habitat and public access, monitored by Minnesota DNR. Protected and restored acres will be measured against goals outlined in the "Minnesota's Wildlife Management Area Acquisition - The Next 50 Years" and the Minnesota Pheasant Action Plan 2020-2023.*

Programs in metropolitan urbanizing region:

- Protected habitats will hold wetlands and shallow lakes open to public recreation and hunting ~ *Parcels that increase the functionality of existing habitat will be acquired and restored to functioning wetlands with diverse upland prairie to serve as habitat for pollinators, resident and migratory game and non-game species. Lands will be transferred to the state as a WMA to provide accelerated wildlife habitat and public access, monitored by Minnesota DNR. Protected and restored acres will be measured against goals outlined in the "Minnesota's Wildlife Management Area Acquisition - The Next 50 Years" and the Minnesota Pheasant Action Plan 2020-2023.*

Programs in prairie region:

- Key core parcels are protected for fish, game and other wildlife ~ *Parcels that increase the functionality of existing habitat will be acquired and restored to functioning wetlands with diverse upland prairie to serve as habitat for pollinators, resident and migratory game and non-game species. Lands will be transferred to the state as a WMA to provide accelerated wildlife habitat and public access, monitored by Minnesota DNR. Protected and restored acres will be measured against goals outlined in the "Minnesota's Wildlife Management Area Acquisition - The Next 50 Years" and the Minnesota Pheasant Action Plan 2020-2023.*

Parcels

Sign-up Criteria?

No

Explain the process used to identify, prioritize, and select the parcels on your list:

Parcels are identified and strategically prioritized using the best science and decision support tools (e.g. HAPET Thunderstorm Maps) available. Preference is given to project sites that help deliver the goals of other recognized conservation initiatives and plans. Data layers (i.e. MN Biological Survey, Natural Heritage Database, MN Prairie Plan, Wellhead Protection Areas, Pheasant Action Plan, existing protected land, etc.) are used to help justify projects and focus areas as well as to inform decisions on top priorities for protection and restoration efforts.

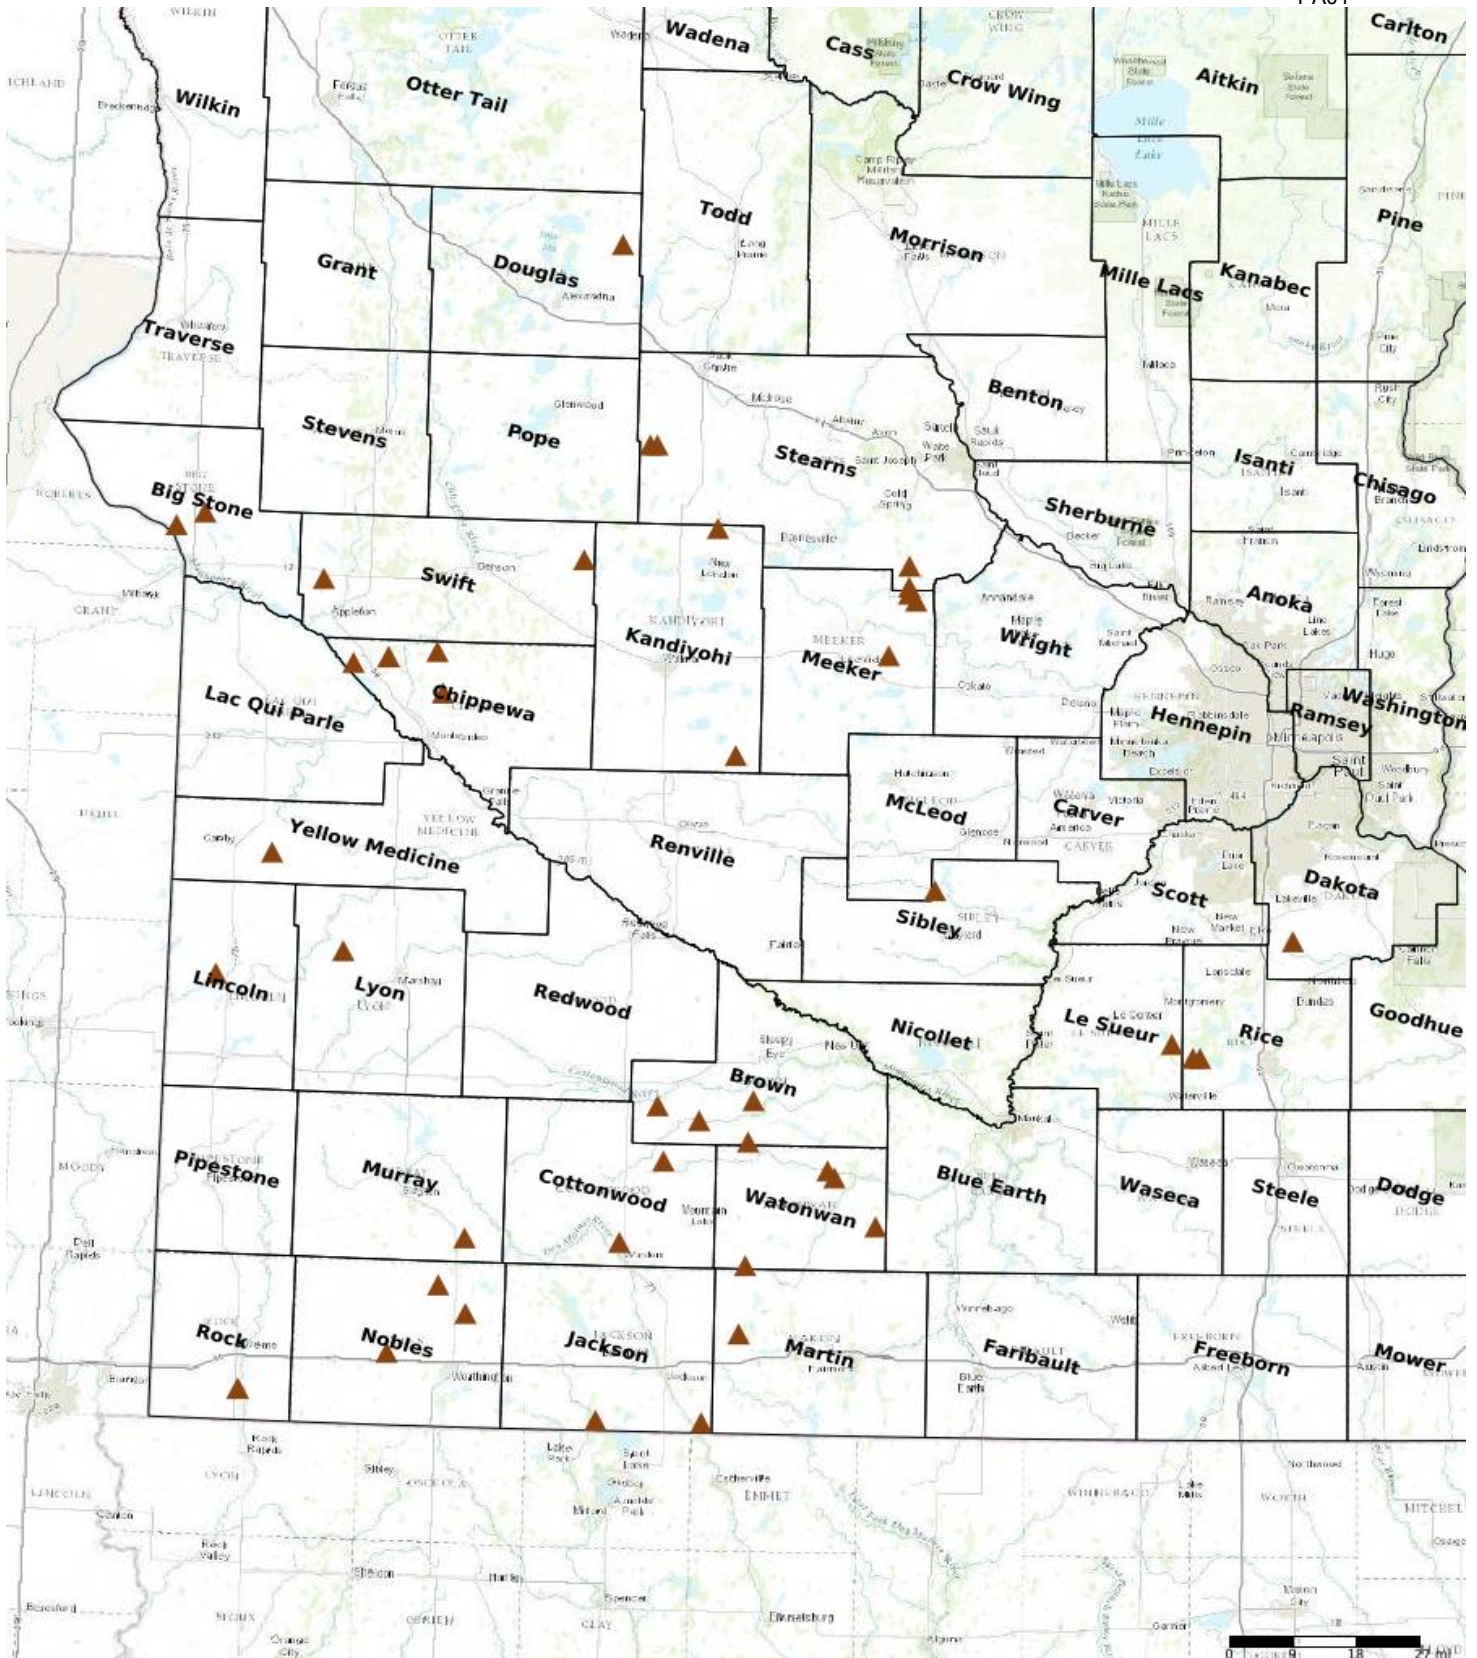

Protect Parcels

Accelerating the Wildlife Management Area Program Phase XIV

This proposal accelerates the protection and restoration of 2,290 acres of prairie grasslands, associated wetlands and other wildlife habitats as State Wildlife Management Areas open to the public.

Bob Gehlen WMA Building Complexes

The Bob Gehlen Wildlife Management Area (WMA) is a 260-acre complex of wildlife habitat in Sibley County. These WMA acquisitions are located less than one hours drive from the Twin Cities, and provides public access for hunting, fishing, hiking, and many other forms of recreation.
