

Lessard-Sams Outdoor Heritage Council

Accelerating the USFWS Habitat Conservation Easement Program - Phase IV
Laws of Minnesota 2023 Accomplishment Plan

General Information

Date: 06/07/2023

Project Title: Accelerating the USFWS Habitat Conservation Easement Program - Phase IV

Funds Recommended: \$5,077,000

Legislative Citation: ML 2023, Ch. 40, Art. 1, Sec. 2, subd. 2(g)

Appropriation Language: \$5,077,000 the first year is to the commissioner of natural resources for agreements to restore and enhance wetland and prairie habitat on habitat easements of the United States Fish and Wildlife Service as follows: \$3,391,000 to Ducks Unlimited and \$1,686,000 to Pheasants Forever. A list of proposed land restorations and enhancements must be provided as part of the required accomplishment plan.

Manager Information

Manager's Name: Doug McClain

Title: Regional Biologist

Organization: Ducks Unlimited, Inc.

Address: Ducks Unlimited, Inc., c/o USFWS 18965 County Highway 82

City: Fergus Falls, MN 56537

Email: dmccclain@ducks.org

Office Number: 2186713565

Mobile Number: 2186713565

Fax Number:

Website: www.ducks.org/minnesota

Location Information

County Location(s): Otter Tail, Douglas, Swift, Big Stone and Pope.

Eco regions in which work will take place:

- Forest / Prairie Transition
- Prairie

Activity types:

- Restore
- Enhance

Priority resources addressed by activity:

- Wetlands
- Prairie

Narrative**Abstract**

DU and PF will help accelerate USFWS wildlife habitat easements by restoring and enhancing 1,900 acres of protected private grasslands and wetlands in Minnesota's Prairie and Transition Sections. These are "working lands" under permanent federal conservation easements that allow delayed haying and/or grazing while protecting restored wetlands and prairie grasslands for nesting ducks, pheasants, and other wildlife. By restoring and enhancing protected grassland and wetland habitat while allowing for continued landowner use of these working private lands, USFWS habitat easements buffer existing protected lands and provide important conservation easement options that complement more restrictive easements and public lands.

Design and Scope of Work

Ducks Unlimited (DU) and Pheasants Forever (PF) will restore and enhance wetlands and prairie on private lands protected by the U.S. Fish & Wildlife Service (USFWS) in Minnesota through federal USFWS grassland habitat conservation easement. DU and PF will restore drained wetlands and cropland back to prairie grassland, and enhance existing habitats. USFWS currently has robust Migratory Bird Conservation Fund (MBCF) budgets to purchase habitat conservation easements, but these funds cannot be used to restore or enhance lands protected. By restoring grasslands and wetlands for USFWS with OHF support, DU and PF will effectively accelerate the rate at which USFWS can protect grassland and wetlands in key focus landscapes in which there are also many state and federal wildlife lands owned and managed in fee-title, and other lands protected by more restrictive conservation easements. These are some of the most productive landscapes in the state for breeding waterfowl and other prairie wildlife including pheasants, and these private working land conservation easements complement other federal, state, and private conservation easement options available to landowners.

USFWS habitat conservation easements not only include protection measures that prevent wetland/prairie conversion and land development/subdivision, but importantly, they also secure rights to restore wetlands and prairie grassland where feasible too - which is the primary purpose of this OHF easement program. DU and PF will restore and enhance private lands eased by USFWS in partnership with the USFWS with technical guidance from their private lands biologists and using private contractors to seed native prairie grass, remove trees, and restore wetlands. DU engineers will survey/design larger complex wetland restorations, and manage restoration contracts to private earth-moving firms. Importantly, as some of these "working private land" easements allow managed livestock grazing, some restoration and enhancement work will include paying contractors to remove old fences and install new fences to facilitate managed rotational grazing systems that protect grassland and wetlands habitats while improving wildlife habitat cover by limiting trees and invasive plants and providing landowners with the opportunity to actively manage/maintain their land.

USFWS "Habitat Easements" have been purchased here for over three decades, and are designed as a habitat protection conservation tool to complement public lands habitat complexes such as federal Waterfowl Production Areas and state Wildlife Management Areas, by keeping privately owned restored grassland and wetland habitat intact and on county tax rolls while allowing for working use of the land. These easements provide landowners with the option of either delayed haying (after July 15) or both grazing and delayed haying, which results in adequate habitat for wetland and upland nesting birds and a working land use option that appeals to some private

landowners. Importantly, these working land easements also help manage plant succession on their land, which is critical to prevent the encroachment of volunteer trees and invasive plant species. Well-managed grazing, delayed haying, and USFWS prescribed fire also benefits those grassland bird species that prefer more open prairie habitats, such as northern pintail, marbled godwit, snipe, and many other prairie species.

How does the plan address habitats that have significant value for wildlife species of greatest conservation need, and/or threatened or endangered species, and list targeted species?

This proposal will restore/enhance wetlands and grasslands to create/expand prairie wetland habitat complexes. USFWS easements can be grazed and delay hayed, land uses which are compatible with grassland nesting birds as per scientific research. Prairies and emergent marshes are identified as critical habitats for many “Species of Greatest Conservation Need” listed in Minnesota’s “Tomorrow’s Habitat for the Wild & Rare: An Action Plan for Minnesota Wildlife”. Grassland nesting birds have shown the largest population decline of any of the bird species. Specific species listed in the Action Plan as requiring prairie (page 255) include seven species of butterflies and three bird species that are native prairie specialists: chestnut-collared longspur, Sprague’s pipit, and Baird’s sparrow. Specific species listed in the Action Plan as requiring emergent marshes (page 267) include least bittern, American bittern, marsh wren, and Virginia rail. The Prairie Parkland has 139 species listed on the SGCN with 13 of these species being unique to the section. Grasslands are also critical to a diverse suite of declining pollinator species.

In addition to these specific wildlife species listed as SGCN in the Action Plan, restored prairie and wetlands in the Prairie Parkland will provide habitat of significant value for other species listed in Appendix B of the Action Plan. Restored and protected prairie will provide habitat of significant value for other SGCN including bird species: upland sandpiper, bobolink, burrowing owl, Le Conte’s sparrow, grasshopper sparrow, eastern meadowlark, swamp sparrow, sharp-tailed grouse, short-eared owl, northern harrier, dickcissel, Henslow’s sparrow, and Nelson’s sharp-tailed sparrow. Upland nesting waterfowl will also benefit including waterfowl listed as SGCN; northern pintail and lesser scaup, which have both seen declines in continental populations. Wetland associated birds such as trumpeter swan, black tern, American bittern, Wilson’s phalarope, and marbled godwit will benefit from wetlands restored and buffered in the prairie landscape through the habitat easements. Mammals including northern grasshopper mouse and Richardson’s ground squirrels, reptiles such as lined snake and Blanding’s turtle, and amphibians such as northern cricket frog and common mudpuppy are SGCN in the Prairie Parkland.

Describe how the plan uses science-based targeting that leverages or expands corridors and complexes, reduces fragmentation or protects areas identified in the MN County Biological Survey:

USFWS biologists score and rank each grassland habitat easement proposal based on ecological site attributes and landscape juxtaposition of protected lands. This ranking process was designed to be relatively simple and evaluate the capability of the proposed easement to provide biological benefits for wetland and grassland dependent wildlife species by considering the habitat on the easement tract as well as its contribution and benefits to other protected lands in the surrounding area. Periodically, the USFWS Minnesota Wetland Acquisition Office in Fergus Falls uses these rankings to re-prioritize the proposals to assure that the USFWS is working on and purchasing the highest ranking proposals throughout the year. DU and PF will rely on the high level of science-based expertise of the USFWS to ensure that easement opportunities are prioritized, and will work closely as a partnership to share the workload and accelerate the easement program in west-central Minnesota. Ducks Unlimited, Pheasants Forever, and USFWS will work together to use science-based targeting to focus promotion of this accelerated habitat conservation easement program, with focus on tracts near existing federal WPAs, state WMAs, and other permanent private land easements. High priority tracts will be those with restorable drained wetlands and converted prairie or expiring CRP that, once fully restored, will build and expand prairie-wetland complexes for

ducks, pheasants, and migratory birds in landscapes with a high density of other protected habitats. Science-based models such as the U.S. Fish & Wildlife Service (USFWS) “Thunderstorm Maps” and “Restorable Wetlands Inventory” will help us determine landscape importance to breeding waterfowl, as will the state Pheasant Plan and Minnesota's Prairie Conservation Plan that helps guide prairie conservation efforts within Complexes, Core, and Corridor areas of western Minnesota. Finally, parcels near sites with relatively high biological diversity and significance based on the Minnesota DNR County Biological Survey (MCBS) will be a priority, and parcels with unique ecological values will be shared with other conservation easement program partners to ensure collaboration, avoid duplication of effort, and that the best conservation easement program option is offered to private landowners.

Which two sections of the Minnesota Statewide Conservation and Preservation Plan are most applicable to this project?

- H1 Protect priority land habitats
- H5 Restore land, wetlands and wetland-associated watersheds

Which two other plans are addressed in this program?

- Long Range Duck Recovery Plan
- Long Range Plan for the Ring-Necked Pheasant in MN

Which LSOHC section priorities are addressed in this program?

Forest / Prairie Transition

- Protect, enhance, and restore wild rice wetlands, shallow lakes, wetland/grassland complexes, aspen parklands, and shoreland that provide critical habitat for game and nongame wildlife

Prairie

- Protect, enhance, or restore existing wetland/upland complexes, or convert agricultural lands to new wetland/upland habitat complexes

Outcomes

Programs in forest-prairie transition region:

- Wetland and upland complexes will consist of native prairies, restored prairies, quality grasslands, and restored shallow lakes and wetlands ~ *USFWS habitat easements will add restored and protected grassland and small wetland acres to augment existing public lands and other permanent easements to create prairie-wetland complexes with a more diverse mix of habitats and conservation options for private landowners. The measure of success will be the number of functioning prairie wetland complexes that provide adequate wetland and grassland acres within a landscape. This is a long-term, programmatic landscape conservation effort that will take time to achieve.*

Programs in prairie region:

- Expiring CRP lands are permanently protected ~ *This outcome will be measured by the sheer number of expiring CRP acres that will be protected through USFWS easements, and the protected grassland and wetland habitat that will not be subject to future conversion to intensive row crop agriculture. By offering private landowners a working lands conservation easement option, landowners in need of an annual income stream from their land will be incentivized to keep grasslands intact and restore wetlands.*

Does this program include leveraged funding?

Yes

Explain the leverage:

To help leverage this state request, the USFWS pledges to spend at least \$1 million in federal Migratory Bird Conservation Funds (federal "duck stamp") to directly purchase additional easements, and \$100,000 in federal staff time to purchase and help guide DU and PF restoration and enhancement of easements acquired. DU and PF strive to use our non-federal private and state OHF grant expense as often as possible as match to leverage other funds to achieve our conservation missions, including private gifts and federal NAWCA grants.

Per MS 97A.056, Subd. 24, Please explain whether the request is supplanting or is a substitution for any previous funding that was not from a legacy fund and was used for the same purpose.

This OHF funding request does not supplant or substitute for any previous funding. This new OHF funding will be used for new conservation work to accelerate USFWS conservation easement delivery in Minnesota to accelerate protection and restoration of wetlands and prairie, and provide "working land" conservation easements options for landowners.

Non-OHF Appropriations

Year	Source	Amount
2010-2019	U.S. Migratory Bird Conservation Fund (federal Duck Stamp)	\$6,000,000

How will you sustain and/or maintain this work after the Outdoor Heritage Funds are expended?

The U.S. Fish & Wildlife Service is responsible for long-term annual monitoring and enforcement. The terms of the easement allow limited delayed haying after July 15 or delayed haying and grazing, but require wetlands and grasslands to be maintained by the private landowner. The easement terms allow DU and PF, under the direction of the U.S. Fish & Wildlife Service, to restore and help enhance wetland restorations or improve grasslands in the future when determined by the Service to be necessary for wildlife habitat management purposes. Through this proposal, DU and PF will assist USFWS in restoring and enhancing easements with state OHF grant funds after USFWS protects the land through easement acquisition with MBCF funding. Long-term habitat management and compliance with easement provisions will be the responsibility of the federal USFWS.

Actions to Maintain Project Outcomes

Year	Source of Funds	Step 1	Step 2	Step 3
2020	U.S. Fish & Wildlife Service	Annually Monitor Easements	Identify Problems, if any	Work with Private Landowners to Resolve

Provide an assessment of how your program celebrates cultural diversity or reaches diverse communities in Minnesota, including reaching low- and moderate-income households:

DU, PF, and USFWS conserve wetlands and prairie for wildlife and people alike. Our habitat projects restore natural infrastructure, which helps to alleviate society's climate impacts and provide clean water for all people including minority and low-income communities who are often disproportionately impacted by the effects of wetland loss and climate change. PF and DU have organizational initiatives to increase the inclusion of all cultures and backgrounds and to ensure a sense of belonging among all people. USFWS purchases easements from willing sellers, which includes people from all ethnicities and socioeconomic groups.

Wetlands recharge groundwater in aquifers that provide clean, dependable water supplies while removing pollutants and reducing downstream flooding. Generational wealth in minority and low-income communities is compromised by a lack of natural infrastructure such as wetlands. Minority and low-income community resiliency is enhanced by the function of wetlands and adjacent grassland habitats that clean water and help absorb impacts from severe weather events.

Restoring wetlands in the Mississippi River watershed benefits all communities who draw their water from the river such as Minneapolis, St. Paul, and St. Cloud. Minneapolis alone draws 21 billion gallons of water a year from the Mississippi River to produce 57 million gallons of drinking water each day.

Protected conservation lands and waters also provide numerous opportunities for fishing, hunting, canoeing, kayaking, birding, and outdoor education for people of all ethnicities and socioeconomic groups that may not otherwise have access to natural open spaces. Indigenous communities may benefit from DU wetland enhancements and restorations that create suitable conditions for wild rice to proliferate. Wetlands deliver a return on investment that helps to support the health, resiliency, and well-being of all communities.

USFWS works strategically to purchase easements on lands with drained wetlands and restorable prairie that are important to both waterfowl, other prairie wildlife, and people too. DU and PF will restore drained pothole wetlands and adjacent uplands back to native prairie grasslands for both wildlife habitat and the public using competitively-selected contractors following state procurement guidelines, including minority and women-owned businesses.

Activity Details

Requirements

If funded, this program will meet all applicable criteria set forth in MS 97A.056?

Yes

Will restoration and enhancement work follow best management practices including MS 84.973 Pollinator Habitat Program?

Yes

Is the restoration and enhancement activity on permanently protected land per 97A.056, Subd 13(f), tribal lands, and/or public waters per MS 103G.005, Subd. 15 or on lands to be acquired in this program?

Yes

Where does the activity take place?

- Permanently Protected Conservation Easements

Land Use

Will there be planting of any crop on OHF land purchased or restored in this program?

Yes

Explain what will be planted:

Some very temporary 1-2 years of crop planting may be required as site preparation for prairie restoration on parcels where herbicides with long (18+ month) residual carryover have been used, where conversion of old fields infested with invasive plants such as smooth brome and reed canary grass may require a year of cropping with herbicides for restoration purposes. No food plots are planned through this program.

Timeline

Activity Name	Estimated Completion Date
Remaining easements restored or enhanced by DU and PF.	June 2028
Some easements restored or enhanced while other restoration plans continue being developed by DU and PF.	December 2025
Some easement restoration plans finalized by DU and PF.	June 2024
Easements closed by USFWS and restoration plans drafted.	December 2026

Date of Final Report Submission: 11/01/2028

Availability of Appropriation: Subd. 7. Availability of Appropriation

(a) Money appropriated in this section may not be spent on activities unless they are directly related to and necessary for a specific appropriation and are specified in the accomplishment plan approved by the Lessard-Sams Outdoor Heritage Council. Money appropriated in this section must not be spent on indirect costs or other institutional overhead charges that are not directly related to and necessary for a specific appropriation. Money appropriated to acquire land in fee may be used to restore, enhance, and provide for public use of the land acquired with the appropriation. Public-use facilities must have a minimal impact on habitat in acquired lands.

(b) Money appropriated in this section is available as follows:

- (1) money appropriated for acquiring real property is available until June 30, 2027;
- (2) money appropriated for restoring and enhancing land acquired with an appropriation in this act is available for four years after the acquisition date with a maximum end date of June 30, 2031;
- (3) money appropriated for restoring or enhancing other land is available until June 30, 2028;
- (4) notwithstanding clauses (1) to (3), money appropriated for a project that receives at least 15 percent of its funding from federal funds is available until a date sufficient to match the availability of federal funding to a maximum of six years if the federal funding was confirmed and included in the original approved draft accomplishment plan; and
- (5) money appropriated for other projects is available until the end of the fiscal year in which it is appropriated.

Budget

Budget reallocations up to 10% do not require an amendment to the Accomplishment Plan.

How will this program accommodate the reduced appropriation recommendation from the original proposed requested amount?

Budgets are reduced proportionate to the funds allocated from the original request.

Describe and explain leverage source and confirmation of funds:

USFWS has pledged \$1 million in federal Migratory Bird Conservation Funds to purchase easements that DU and PF will restore/enhance, and \$100,000 of in-kind staff support.

Personnel

Has funding for these positions been requested in the past?

Yes

Please explain the overlap of past and future staffing and position levels previously received and how that is coordinated over multiple years?

Staff work on multiple projects funded by separate OHF grants.

Contracts

What is included in the contracts line?

Contracts include wetland and grassland restoration and enhancement contracts, including earth moving with heavy equipment to remove trees, sediment, drainage tile, and install berms, water control structures, and native seed materials.

Travel

Does the amount in the travel line include equipment/vehicle rental?

No

Explain the amount in the travel line outside of traditional travel costs of mileage, food, and lodging

All travel expense is for in-state vehicle mileage, lodging, and food. Nearly all travel expense will be for mileage.

I understand and agree that lodging, meals, and mileage must comply with the current MMB Commissioner Plan:

Yes

Direct Support Services

How did you determine which portions of the Direct Support Services of your shared support services is direct to this program?

Minnesota DNR grants staff previously reviewed and approved DU accounting methodology for Direct Support Services, which are calculated and included in DU staff costs. DU Direct Support Services constitute approximately 10% of DU overall staff costs on average among DU conservation staff billing categories. DU breaks out and invoices for Direct Support Service expenses approved by DNR for reimbursement separately from Personnel expenses. In accordance with 2 CFR 200, DU uses the direct allocation method of allocating costs to programs and final cost objectives. This process of allocating costs is accomplished through the use of hourly rates. The direct cost of activities, including direct support expenses, is included in these hourly rates. The rates are comprised of costs for salaries, benefits, office space, general insurance, support staff, office supplies, and other various direct expenses incurred at the regional offices and conservation department at the home office. All costs are assigned to conservation projects (net of applicable personnel and other costs that are non-conservation related). Hourly charges represent the amount that DU charges conservation projects per hour for each staff member working on the project. These costs represent expenses that directly support the labor cost necessary for the development of a specific water/wetlands conservation project.

PF utilizes the Total Modified Direct Cost method. This methodology is annually approved by the U.S. Department of Interior's National Business Center as the basis for the organization's Indirect Cost Rate agreement. PF's allowable direct support services cost is 3.9%. In this proposal, PF has discounted its rate to 1.5% of the sum of personnel, contracts, professional services, and travel, and will donate the difference in-kind.

Other Equipment/Tools

Give examples of the types of Equipment and Tools that will be purchased?

Equipment and Tools include hand tools and gear used to survey and design wetland restorations such as laser levels and GPS survey devices and restore grasslands. This may also include lease charges for GPS survey equipment.

Federal Funds

Do you anticipate federal funds as a match for this program?

Yes

Are the funds confirmed?

Yes

Is Confirmation Document attached?

[Yes](#)

- Cash : \$1,000,000
- In Kind : \$100,000

Parcels

For restoration and enhancement programs ONLY: Managers may add, delete, and substitute projects on this parcel list based upon need, readiness, cost, opportunity, and/or urgency so long as the substitute parcel/project forwards the constitutional objectives of this program in the Project Scope table of this accomplishment plan. The final accomplishment plan report will include the final parcel list.

Parcel Information

Sign-up Criteria?

No

Explain the process used to identify, prioritize, and select the parcels on your list:

Easements are selected by USFWS biologists who score and rank each grassland habitat easement proposed based on ecological site attributes and landscape juxtaposition using a scoring process that is developed internally with science-based guidance from their Habitat & Population Evaluation Team science staff in Fergus Falls. This ranking process was designed to be relatively simple and evaluate the capability of the proposed easement to provide biological benefits for wetland and grassland dependent wildlife species by considering the habitat on the easement tract as well as its contribution and benefits to other protected lands in the surrounding area.

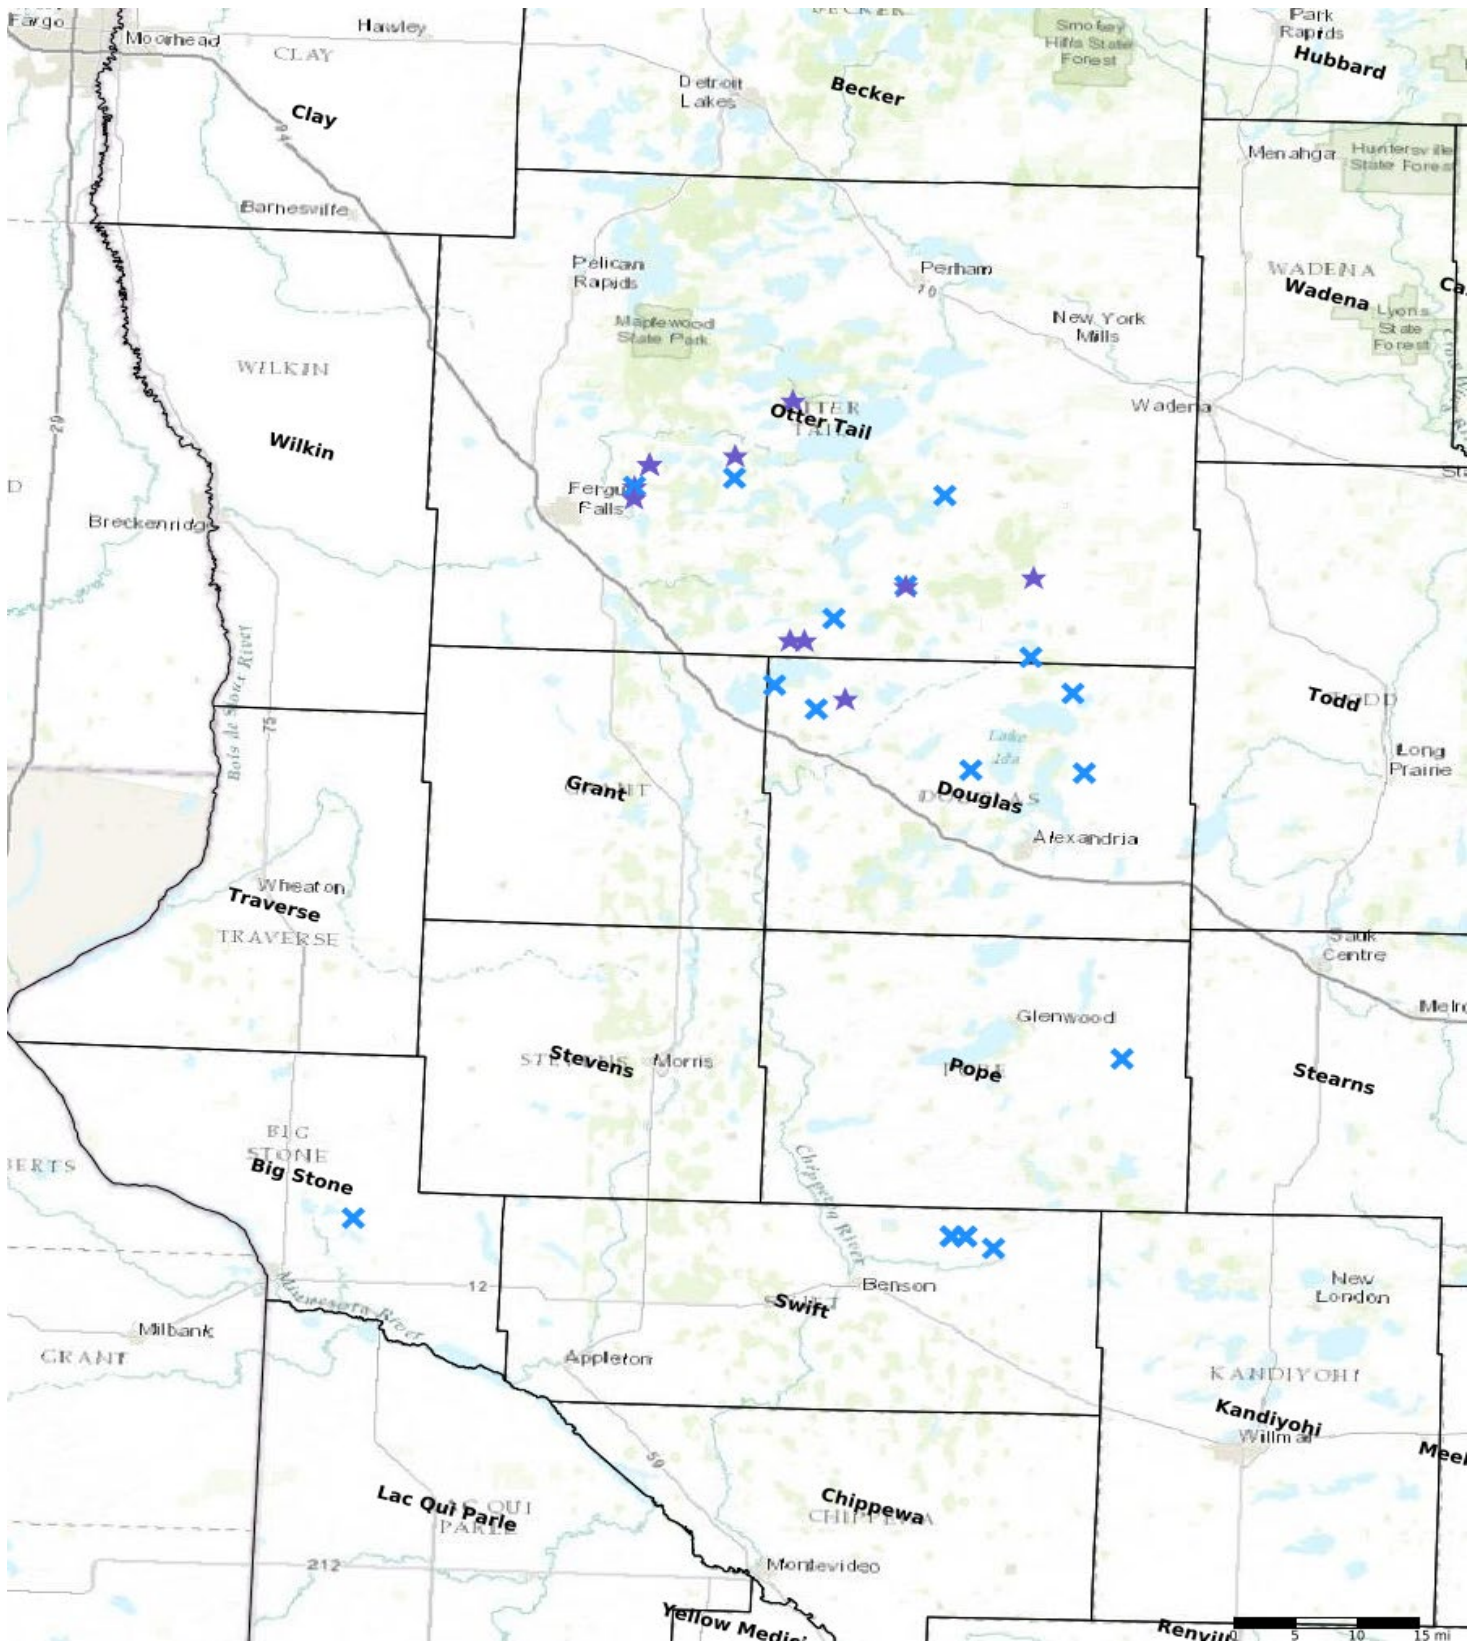

Periodically through out the year, the USFWS Minnesota Wetland Acquisition Office in Fergus Falls uses these rankings to re-prioritize the proposals to assure that the USFWS is working on and purchasing the highest ranking proposals throughout the year. DU and PF will rely on the high level of science-based conservation expertise and rigorous easement selection process of the USFWS to ensure that easements acquired prioritized appropriately and therefore subsequently already prioritized for wetland and grassland habitat restoration and enhancement activities by DU and PF.
