Lessard-Sams Outdoor Heritage Council

Enhanced Public Land - Grasslands - Phase VII

Laws of Minnesota 2024 Accomplishment Plan

General Information

Date: 08/25/2025

Project Title: Enhanced Public Land - Grasslands - Phase VII

Funds Recommended: $1,902,000

Legislative Citation: ML 2024, Ch. 106, Art. 1, Sec. 2, Subd. 2(f)

Appropriation Language: $1,902,000 the second year is to the commissioner of natural resources for an agreement with Pheasants Forever to enhance and restore grassland and wetland habitat on public lands within the forest prairie transition, metro urban, and prairie ecoregions of Minnesota.

Manager Information

Manager's Name: Becca Kludt
Title: MN Restoration Manager
Organization: Pheasants Forever, Inc.
Address: 547 5th St SW
City: Perham, MN 56573
Email: bkludt@pheasantsforever.org
Office Number: 218-220-5391
Mobile Number:
Fax Number:
Website: www.pheasantsforever.org

Location Information

County Location(s): Swift, Stevens, Renville, Pope, Murray, Meeker, Martin, Lincoln, Lac qui Parle, Kandiyohi, Freeborn, Fillmore, Cottonwood, Clay, Chippewa, Big Stone, Becker, Anoka, Otter Tail, Lyon, Norman, Mahnomen, Douglas, Yellow Medicine, Todd, Pipestone, Jackson, Redwood, Watonwan, Mower, Grant, Washington, Wright, Traverse, Blue Earth, Sibley, Rock, Brown and Faribault.

Eco regions in which work will take place:

Forest / Prairie Transition

Metro / Urban

Prairie

Activity types:

Enhance

Restore

Priority resources addressed by activity:

Prairie

Wetlands

Narrative

Abstract

In this phase of the Enhanced Public Lands - Grassland program, Pheasants Forever (PF) will enhance or restore 4,000 acres of upland and wetland habitat. The goal of this program is to improve habitat on existing Wildlife Management Areas (WMAs), Waterfowl Production Areas (WPAs), and National Wildlife Refuges (NWRs) that are open to public hunting. PF does this by working with agency partners to develop restoration and enhancement plans and hiring local, private contractors to complete work. Examples of habitat improvements include restoring wetlands, removing invasive trees, conducting conservation grazing, and seeding grasslands with high-diversity native seed mixes.

Design and Scope of Work

Grassland-wetland ecosystems require regular disturbance to preserve their functionality and quality to positively impact fish, wildlife, and the public. Lack of disturbance on native and restored prairies has resulted in degraded habitats characterized by low plant diversity, presence of non-native or invasive species, and the spread of voluntary trees into open prairie. Wetlands embedded in these grasslands require restoration to achieve their fullest functionality, or have structures that need repair. The Minnesota Prairie Conservation Plan (MPCP) identifies restoration and enhancement as two strategies to combat these issues. In accordance with this plan, Pheasants Forever has created the Enhanced Public Lands - Grasslands program to restore and enhance grassland and wetland habitats on existing WMAs, WPAs, and NWRs (many of which were purchased in sub-optimal conditions) in the prairie, forest/prairie transition, and metro regions. Pheasants Forever will utilize a previously developed Request for Proposals (RFP) and process to evaluate projects submitted by agency partners.
Restoration and enhancement activities include the following:
1) Wetland restoration/enhancement: Tools used to accomplish this include removing drain tile, constructing/repairing earthen dams and/or water control structures, removing sediment and invasive narrow leaf cattail control. Wetlands targeted for enhancement are vital to providing food, cover, and the space required for breeding waterfowl while being essential to and landscape resiliency in the face of climate change.
2) Upland Enhancement: We will use a site-specific combination of techniques (e.g. cultivation, tree removal, herbicide, and prescribed fire) to bring back productivity to these public lands. In close collaboration with the land managers, we will seed a diverse mix of native grasses and forbs that are well adapted to site conditions and are ideal for upland nesting bird production and success of pollinator species. Mowing will be used as needed to manage annual weed pressure to ensure establishment.
3) Prescribed burning: This is the primary tool for managing grassland habitat as it is cost effective, increases vigor by removing built up litter, and sets back invasive woody species.
4) Conservation Grazing: This is an important enhancement tool for sites that are difficult to conduct prescribed fires or need to target specific enhancement needs (e.g. cool season grass suppression, tree invasion, etc.). Permanent infrastructure with a lifespan of 30+ years will be installed to conduct conservation grazing plans

written to benefit wildlife.
5) Tree Removal: Research has shown that invasive trees are detrimental to prairie/grassland wildlife and thus will be removed with this proposal. These trees reduce nesting success by providing perches for aerial predators, dens for mammalian predators, and increases predator efficiency by creating habitat edges and fragmenting habitat. Predators are highly effective at predating both nests and nesting birds, especially in fragmented low quality habitat.

Restoring or enhancing habitat to its highest function in these areas will not only greatly benefit fish and wildlife populations, but also reduce future management costs (by creating robust, better self-regulating ecosystems), and improve the enjoyment of the area by the public.

Explain how the plan addresses habitat protection, restoration, and/or enhancement for fish, game & wildlife, including threatened or endangered species conservation

In line with the goals of the MPCP, this program directly addresses the loss of quality habitat on reconstructed and native prairies through restoration and enhancement best practices. By increasing the quality of existing remnant and reconstructed prairie habitat we benefit numerous species that are of special concern, threatened, or endangered. This proposal targets grassland species, including but not limited to, greater prairie chickens, ring-necked pheasants, monarch butterflies, honey bees and Dakota skippers.

What are the elements of this plan that are critical from a timing perspective?

Without frequent disturbance grasslands naturally degrade over time. This phenomenon is termed grassland succession. As grassland succession progresses, the cost to correct it increases . This program allows PF to consistently enhance public lands at maximum capacity for the benefit of wildlife and the public.

Describe how the plan expands habitat corridors or complexes and/or addresses habitat fragmentation:

This proposal improves habitat within corridors and complexes which increases their usability by wildlife. For instance, large expanses of low-quality habitat provide little value to wildlife species who are not generalist, effectively reducing the size of the complex. Enhancing and restoring habitat within these complexes increases the usable area for a greater number of species. A characteristic of low-quality habitat is an increase in habitat edges, which is a type of habitat fragmentation. Rows of trees, and drastic changes in vegetative cover (e.g. visible transition from a stand of smooth brome to Kentucky bluegrass) create edges for predators to navigate and increases their efficiency when hunting. By removing trees and restoring grasslands to high-diversity mixes of grasses and forbs, we reduce the amount of habitat fragmentation within the greater complex.

Which top 2 Conservation Plans referenced in MS97A.056, subd. 3a are most applicable to this project?

Long Range Plan for the Ring-Necked Pheasant in MN

Minnesota Prairie Conservation Plan

Explain how this plan will uniquely address habitat resilience to climate change and its anticipated effects on game, fish & wildlife species utilizing the protected or restored/enhanced habitat this proposal targets.

Healthy ecosystems with diverse native plant communities and fully functional hydrologic systems are more resilient to the changing climate. They do a better job of warding off invasive species by filling all available niches, or "free spots," where invasive may create a foothold. Native vegetative communities also provide the best habitat for native wildlife. This is especially important for species with specific habitat requirements or species that are endemic to a particular region. Many of the sites restored or enhanced under this program are home to these sensitive species and help buffer the effect of climate change on wildlife populations. Restored or enhanced wetlands optimize groundwater recharge, nitrogen and carbon cycling, and constantly provide water for local game, fish, and wildlife species. By restoring, and enhancing targeted tracts we're creating habitats that are both resilient to climate change and require less maintenance due to their self-regulating nature.

Which LSOHC section priorities are addressed in this program?

Forest / Prairie Transition

Protect, enhance, and restore migratory habitat for waterfowl and related species, so as to increase migratory and breeding success

Metro / Urban

Protect, enhance, and restore remnant native prairie, Big Woods forests, and oak savanna with an emphasis on areas with high biological diversity

Prairie

Restore or enhance habitat on public lands

Outcomes

Programs in forest-prairie transition region:

Increased waterfowl and upland bird migratory and breeding success ~ *Outcomes will be measured by resource professionals and evaluated by using the best science available to land managers.*

Programs in metropolitan urbanizing region:

Other ~ *Outcomes will be measured by resource professionals and evaluated by using the best science available to land managers.*

Programs in prairie region:

Improved condition of habitat on public lands ~ *Outcomes will be measured by resource professionals and evaluated by using the best science available to land managers.*

Per MS 97A.056, Subd. 24, Please explain whether the request is supplanting or is a substitution for any previous funding that was not from a legacy fund and was used for the same purpose.

This proposal supplements past investments and is focused on accelerating the protection and restoration of strategically selected parcels.

How will you sustain and/or maintain this work after the Outdoor Heritage Funds are expended?

The enhancements completed under this phase will generally allow the unit to be managed more effectively by either the USFWS or MNDNR. Limited station/area funds, constant pressure from invasive species (i.e. grasses, forbs, and trees), water quality decline, aging grasslands, climate change and other factors increase the difficulty of maintaining these enhancements; therefore, we expect continued opportunity to supplement local agency efforts. While it's difficult for a third party like PF to provide an analysis of future costs on existing public land, according to the Long-Range Budget Analysis of Land Management Needs, the cost of long-term management ranges from $11-16/acre annually. We expect the average need to be the same for the parcels enhanced or restored under this program.

Actions to Maintain Project Outcomes

Year	Source of Funds	Step 1	Step 2	Step 3
Post Project Completion - NWR	USFWS - Federal	Monitoring	Maintience	-
Post Project Completion - WPA	USFWS - Federal	Monitoring	Maintience	-
Post Project Completion - WMA	MN DNR - Game and Fish Funds	Monitoring	Maintience	-

Provide an assessment of how your program celebrates cultural diversity or reaches diverse communities in Minnesota, including reaching low- and moderate-income households:

The goal of this program is to enhance and restore wildlife habitat on public lands open to all Minnesotans, regardless of cultural background or fiscal standing. WPAs, WMAs, and NRWs eligible for this program are free and open to access by all. This program spans all of the Prairie, Forest-Prairie, and Metro regions. Some acquisitions will be nearby areas with diverse or low-income communities. This program engages with everyone who wants to participate in public lands and the outdoors.

Activity Details

Requirements

If funded, this program will meet all applicable criteria set forth in MS 97A.056?
Yes

Will restoration and enhancement work follow best management practices including MS 84.973 Pollinator Habitat Program?
Yes

Is the restoration and enhancement activity on permanently protected land per 97A.056, Subd 13(f), tribal lands, and/or public waters per MS 103G.005, Subd. 15 or on lands to be acquired in this program?
Yes

Where does the activity take place?

WMA

WPA

Refuge Lands

Land Use

Will there be planting of any crop on OHF land purchased or restored in this program, either by the proposer or the end owner of the property, outside of the initial restoration of the land?
No

Will insecticides or fungicides (including neonicotinoid and fungicide treated seed) be used within any activities of this program either in the process of restoration or use as food plots?
No

Timeline

Activity Name	Estimated Completion Date
Complete all enhancement/restoration work	9/1/2029
Re-evaluate project status/budget and solicit additional projects as needed	12/31/2025
Enhancement/restoration work begins	5/31/2025
Select projects for completion and hire contractors to complete habitat work	1/31/2025
Review project RFP's with project selection committee	11/30/2024
Distribute project Request for Proposals (RFP) to area land managers	9/1/2024

Date of Final Report Submission: 06/30/2028

Availability of Appropriation: Subd. 7.
Availability of Appropriation
(a) Money appropriated in this section may not be spent on activities unless they are directly related to and necessary for a specific appropriation and are specified in the accomplishment plan approved by the Lessard-Sams Outdoor Heritage Council. Money appropriated in this section must not be spent on indirect costs or other institutional overhead charges that are not directly related to and necessary for a specific appropriation. Money appropriated for fee title acquisition of land may be used to restore, enhance, and provide for public use of the land acquired with the appropriation. Public-use facilities must have a minimal impact on habitat in acquired lands.

(b) Money appropriated in this section is available as follows:
(1) money appropriated for acquiring real property is available until June 30, 2028;
(2) money appropriated for restoring and enhancing land acquired with an appropriation in this section is available for four years after the acquisition date with a maximum end date of June 30, 2032;
(3) money appropriated for restoring or enhancing other land is available until June 30, 2029;
(4) notwithstanding clauses (1) to (3), money appropriated for a project that receives at least 15 percent of its funding from federal funds is available until a date sufficient to match the availability of federal funding to a maximum of six years if the federal funding was confirmed and included in the original approved draft accomplishment plan; and(5) money appropriated for other projects is available until the end of the fiscal year in which it is appropriated.

Budget

Budget reallocations up to 10% do not require an amendment to the Accomplishment Plan.

Amount of Request: $1,902,000
Amount of Leverage: $111,300
Leverage as a percent of the Request: 5.85%
DSS + Personnel: $145,100
As a % of the total request: 7.63%
Easement Stewardship: -
As a % of the Easement Acquisition: -

How will this program accommodate the reduced appropriation recommendation from the original proposed requested amount?
We will accommodate the reduced appropriation recommendation by reducing down all acres/activities and dollar amounts proportionate to the percent reduction.

Detail leverage sources and confirmation of funds:
Leverage is expected from multiple sources including, but not limited to, federal sources, land value donations, contractor donations and PF. Not every source is 100% confirmed at this point. However, PF has an exemplary track record of delivery and over-achievement of match commitments that further stretch OHF funding.

Does this project have the ability to be scalable?
Yes

If the project received 50% of the requested funding

Describe how the scaling would affect acres/activities and if not proportionately reduced, why?
If this project is reduced by 70% we would scale down all acres/activities and dollars amounts proportionately.

Describe how personnel and DSS expenses would be adjusted and if not proportionately reduced, why?
Personnel and DSS will be scaled down proportionately.

Personnel

Has funding for these positions been requested in the past?
Yes

Contracts

What is included in the contracts line?
We anticipate that all of the contract funding will be used for restoration and enhancement activities.

Travel

Does the amount in the travel line include equipment/vehicle rental?
No

Explain the amount in the travel line outside of traditional travel costs of mileage, food, and lodging
N/A

I understand and agree that lodging, meals, and mileage must comply with the current MMB Commissioner Plan:
Yes

Direct Support Services

How did you determine which portions of the Direct Support Services of your shared support services is direct to this program?
PF utilizes the Total Modified Direct Cost method. This methodology is annually approved by the U.S. Department of Interior's National Business Center as the basis for the organization's Indirect Cost Rate Agreement. PF's allowable direct support services cost is 3.97%. In this proposal, PF has discounted its rate to 2.5% of the sum of personnel, contracts, and travel. We are donating the difference in-kind.

Federal Funds

Do you anticipate federal funds as a match for this program?
Yes

Are the funds confirmed?
No

What is the approximate date you anticipate receiving confirmation of the federal funds?
7/1/2026

Parcels

Parcel Information

Sign-up Criteria?
No

Explain the process used to identify, prioritize, and select the parcels on your list:
Requests for proposals will be sent to MN public land managers and PF chapters within the prairie, prairie/forest transition, and metro regions. PF will evaluate projects based on proximity to and size habitat complex, benefit to T/E and SGCN, and alignment with existing conservation plans. Projects will be accepted until all funds have been spent.
