

Lessard-Sams Outdoor Heritage Council

Pine and Leech Watershed Phase III Targeted RIM Easement Permanent Land Protection Laws of Minnesota 2024 Accomplishment Plan

General Information

Date: 02/04/2025

Project Title: Pine and Leech Watershed Phase III Targeted RIM Easement Permanent Land Protection

Funds Recommended: \$2,242,000

Legislative Citation: ML 2024, Ch. 106, Art. 1, Sec. 2, Subd. 5(b)

Appropriation Language: \$2,242,000 the second year is to the Board of Water and Soil Resources, in cooperation with the Crow Wing County Soil and Water Conservation District, to acquire permanent conservation easements of high-quality forest, wetland, and shoreline habitat. Up to \$120,000 of the total amount is for establishing a monitoring and enforcement fund as approved in the accomplishment plan and subject to Minnesota Statutes, section 97A.056, subdivision 17. Subdivision 8, paragraph (b), does not apply to this project. A list of permanent conservation easements must be provided as part of the final report.

Manager Information

Manager's Name: Melissa Barrick

Title: District Manager

Organization: Crow Wing Soil and Water Conservation District

Address: 322 Laurel St Ste 22

City: Brainerd, MN 56401

Email: melissa@cswswcd.org

Office Number: 2188286197

Mobile Number:

Fax Number:

Website: www.cswswcd.org

Location Information

County Location(s): Cass, Crow Wing and Hubbard.

Eco regions in which work will take place:

Northern Forest

Activity types:

Protect in Easement

Priority resources addressed by activity:

Wetlands

Forest

Habitat

Narrative**Abstract**

We will partner with the BWSR RIM Easement Program, Hubbard, Crow Wing, and Cass Counties and Soil and Water Conservation Districts (SWCD) to protect 610 acres of high-quality private forest, wetlands, and shoreline in the Northern Forest Ecological Section. This project will be successful because of the sophisticated RAQ scoring, integrative parcel selection, proven outreach tactics, SWCD landowner relationships, and BWSR and SWCD RIM partnership. Development trends seriously threaten Cisco, Golden-winged Warbler, Northern Long-eared Bat, Blanding's Turtles, and over 107 unique, rare, endangered, and threatened species that live in these watersheds' uplands, lowlands, and mature forests.

Design and Scope of Work

This project will build the success of the 2020 and 2021 Lessard Sam's Outdoor Heritage Council (LSOHC) Grant with the Reinvest in Minnesota (RIM) easements on targeted private forests, wetlands, and shorelines within the Leech Lake and Pine River Major Watersheds (hydrologic unit codes 07010102 and 7010105). The additional funds will help us meet the watershed protection goals.

These watersheds contain:

- 1,250 lakes, which cover 354 square miles same size city of Fort Worth, Texas.
- 88 lakes with High to Highest Outstanding Biological Significance (Minnesota Department of Natural Resources (MN DNR)).
- 92 wild rice lakes.
- 29 Cisco lakes.

In 2019, the MN DNR, Board of Water and Soil Resources (BWSR), and Technical Service Area 8 developed a protection framework based on MN DNR Fisheries Cisco research. The MN DNR identified a strong correlation between lake water quality and habitat that sustains fish populations and maintains 75 percent forest cover in the watershed. The Leech Lake and Pine River Landscape Stewardship Plans (LSP) determined existing protection levels in each 144 minor watersheds and the number of acres needed to achieve the 75 percent protection goal. The Leech and Pine River Comprehensive Watershed Plans (CWP) adopted the 75 percent protection goal and pinpointed private woodlands as essential to preserving. The CWPs identified issues and concerns and developed a targeted and measurable 10-year implementation plan. Both plans recognized conservation easements as a critical tool for protecting priority groundwater, habitat, and surface water. The team developed a methodology for targeting specific large-tract private forested parcels. The process is called RAQ (Riparian, Adjacent, Quality); each parcel is scored on a 0-9 scale:

Riparian: parcel on the river or lake.

Adjacency: to protected lands, i.e., county, state, or federal land.

Quality: Wild Rice, Cisco, and biodiversity.

The most significant risk for development and fragmentation is riparian private forest lands. The RAQ tool prioritizes private parcels adjacent to state or federal lands (protected lands in the model). This will create extensive, long-lasting habitat complexes. The LSPs calculated private ownership as 49 percent and 28 percent,

respectively. Over 320,000 high-quality private forest acres (over 20 acres in size) have no protection status within these watersheds. The LSPs and CWP's selected Headwaters, Whitefish Lake, Lower Pine, Little Pine River, Woman Lake, Steamboat River, and Kabekona River (7 of 12 minor Watersheds) for habitat protection. The staff will use RAQ scores to filter 320,000 to 2,280 acres within the minor watersheds.

The LSPs calculated that property values surrounding these high-quality waterbodies are worth over 10 billion dollars. The Pine River and Leech Watersheds have some of the highest-quality lakes and fisheries within the lower 48 States. The tourism industries within Hubbard, Cass, and Crow Wing Counties generate over \$421 million in yearly sales (Explore Minnesota 2019). The private lands within these watersheds deserve protection strategies. This project will implement 10 RIM easements to ensure the habitat stays intact and protect the Leech Lake and Pine River Watersheds' local tourism economy and tax base.

Explain how the plan addresses habitat protection, restoration, and/or enhancement for fish, game & wildlife, including threatened or endangered species conservation

The MN DNR rare species guide indicated that Leech and Pine River Watersheds contain over 108 rare species of fish, invertebrates, plants, reptiles, and mammals. These species depend on the fringe wetlands, forested corridors, high-quality lakes, and shoreland vegetative habitats.

Blanding's Turtles need both upland and wetlands to complete their life cycle. This habitat includes calm shallow water bodies (type 1-3 wetlands), essential amphibian and invertebrate breeding grounds, and food sources for the Blanding's Turtle. The turtles nest on undeveloped land in open grassy or brushy sand.

Wild rice provides some of Minnesota's most important habitats for migrating and breeding waterfowl. More than 17 species of Species of Greatest Conservation Need (SGCN) use wild rice areas as habitats for breeding, migration, and foraging. They include Common Loon, Trumpeter Swan, Bald Eagle, American Bittern, Least Bittern, Red-necked Grebe, Sora Rail, Virginia Rail, Yellow Rail, Black Tern, Rusty Blackbird, Sedge Wren, Lesser Scaup, Northern Pintail, American Black Duck. Wild Rice grows in shallow lakes, rivers, and shallow bays of deeper lakes.

The Northern Long-eared Bat was recently added to the federal threatened species list because of the lack of roosts. The MN DNR and US Fish and Wildlife Service identified over 11 townships in Cass, Crow Wing, and Hubbard Counties that contain mature roost trees for the Northern Long-eared Bat. Approximately 230 mature roost trees were identified in Minnesota. An estimated 30 percent of the trees were placed in Hubbard, Cass, and Crow Wing Counties.

The MN DNR identified the Golden-winged Warbler as an SGCN due to a population that has declined by 60 percent across the United States and Canada. Minnesota's critical upland, lowland, and mature forest habitats support over 47 percent of the species' global population. This bird is a Minnesota icon and symbol of private land stewardship. These unprotected remote forests and upland habitats are a mecca for all these species. This project will protect these crucial habitats.

What are the elements of this plan that are critical from a timing perspective?

The 2020 US Census data indicate that over 3.8 million people live in the Twin Cities and Fargo. These people are two hours or less from Pine and Leech Watersheds. According to the Minnesota State Demographic Center, from 1990-2021, Cass, Hubbard, and Crow Wing Counties' populations increased by 144 percent (an average of 590 people annually). Family-owned cabins are transforming into lake homes. The cabin footprint increased by 479 percent (700 to 3,350 square feet, WI DNR Study). Vegetative buffers have been converted to manicured lawns re-contoured towards the lake. These changes significantly impact bird nesting, fish spawning, frogs, rare and

endangered species, forest health, and water quality. The cost will increase, and opportunities will be less if we wait to protect these critical habitats. This program seeks to protect these sensitive areas before they are lost.

Describe how the plan expands habitat corridors or complexes and/or addresses habitat fragmentation:

This project will utilize LSPs and CWP minor watersheds science-based targeting to expand important habitat corridors and complexes on private lands. The RAQ Tool will score individual private, forested parcels in the following manner:

- Riparian is whether the parcel is next to a priority water resource (1-3 points).
 - Adjacency is whether it is next to existing state, county, or federal land (1-3 points)
 - Quality is the locally determined value of the land (1-3 Points), i.e., trout/cisco lakes, wild rice, old-growth forests, MN DNR phosphorus sensitivity, rare species, biodiversity, and groundwater recharge and sensitive areas.
- The LSPs provided: 62,000 RAQ scores for all private parcels, RAQ score maps, databases, landowner outreach tables, percent of protected land, rare and unique species, species of concern, cisco and wild rice, and easement acre goal for each subwatershed. This data targets RIM easements to the parcel level, allowing us to hand-select the best parcels for habitat value and prevent future fragmentation in the entire watershed. This methodology is proven through Environmental Natural Resource Trust Fund and Clean Water Fund RIM easement program. The local government units will utilize LSPs to complete the following items:

Step 1: Filter the outreach database to find parcel RAQ scores 7-9 within a prioritized HUC 10 sub-watersheds adjacent to selected high-quality lakes.

Step 2: Review selected parcels and scores.

Step 3: Develop individual maps for each landowner with the specific easement boundary and price associated with the easement.

Step 4: Mail information on the RIM easement program and map to selected landowners.

Step 5: Rank and score RIM applications with an internal scoring sheet.

Step 6: Host an interagency committee meeting to review all applications.

Step 7: Begin the RIM easement application process with BWSR.

The Crow Wing SWCD has utilized this process and has protected over 23 miles of shoreline and 2,800 acres of habitat.

Which top 2 Conservation Plans referenced in MS97A.056, subd. 3a are most applicable to this project?

Minnesota Forest Resource Council Landscape Plans

National Fish Habitat Action Plan

Explain how this plan will uniquely address habitat resilience to climate change and its anticipated effects on game, fish & wildlife species utilizing the protected or restored/enhanced habitat this proposal targets.

Of the 750 acres protected, 60 to 70 percent is high-quality forest land. According to the i-tree canopy calculation tool (developed by the US Forest Service), priority subwatershed ranges from 30-40 percent tree canopy (<https://ourtrees.itreetools.org/>). The 487 acres of forestland will sequester over 331 tons of carbon per year. The 487 acres of forest land will reduce 211,575 gallons per year of runoff to a nearby lake or river. The 487 forest acres will intercept 30 million gallons of water annually. For decades, research has pointed to the diverse forest as the number one way to mitigate climate change effects. The MN DNR Fisheries research identified the importance

of 75 percent forest cover to help sustain cisco fish populations with climate change into the future. This project will help permanently protect high-quality, diverse forests and ensure the forest stays for generations.

Which LSOHC section priorities are addressed in this program?

Northern Forest

Protect shoreland and restore or enhance critical habitat on wild rice lakes, shallow lakes, cold water lakes, streams and rivers, and spawning areas

Outcomes

Programs in the northern forest region:

Forestlands are protected from development and fragmentation ~ *This project will measure the number acres of forestland, wetlands, and habitat enrolled into RIM easements. We also will measure the number of miles of shoreline protected and the individual minor watershed 1W1P plan percent protection goal. The other evaluation will include scoring sheet for each conservation easement, public meeting evaluation forms, and anecdotal information from landowners on species on their land, habitat value, and might also include cultural resource protection. This project will employ lessons learned from past easement program which include: excellent communication, direct and correct landowner responsibility information, maps, standard payment rate, direct mailing, and partnering meeting.*

Per MS 97A.056, Subd. 24, Please explain whether the request is supplanting or is a substitution for any previous funding that was not from a legacy fund and was used for the same purpose.

This funding request is not supplanting existing funding or a substitution for any previous funding.

How will you sustain and/or maintain this work after the Outdoor Heritage Funds are expended?

Once a RIM easement is acquired, BWSR is responsible for monitoring and enforcement into perpetuity. BWSR partners with local SWCDs to oversee, monitor, and inspect its conservation easements. Easements are inspected for the first five consecutive years beginning in the year after the easement is recorded. After that, on-site inspections are performed every three years, and compliance checks are performed in the other two years. SWCDs report to BWSR on each site inspection, and partners' staff document findings. A non-compliance procedure is implemented when potential violations or problems are identified.

Perpetual monitoring and enforcement costs have been calculated at \$10,000 per easement. This value is based on using local SWCD staff to monitor easements and existing enforcement authorities. The amount listed for Easement Stewardship covers the SWCD regular monitoring costs, BWSR oversight, and any necessary enforcement.

Actions to Maintain Project Outcomes

Year	Source of Funds	Step 1	Step 2	Step 3
2024 beyond	RIM Stewardship Fees	Monitoring	Enforcement as necessary	-

Provide an assessment of how your program celebrates cultural diversity or reaches diverse communities in Minnesota, including reaching low- and moderate-income households:

The Leech Lake Band of Ojibwe tribal land contains 45 percent of the Leech Lake River Watershed area (387,132 acres). Hubbard and Cass Counties have great relationships with the Leech Lake Band of Ojibwe. The SWCD staff meets with the tribal leaders and communicates regularly with the division of resources management. Through the

BWSR One Watershed One Plan program, the SWCDs, counties, and Leech Lake Band of Ojibwe have worked together to have a better understanding of each other roles within the watershed. We will keep the contacts and connections updated on this project. Wild rice, or manoomin (good seed) in Ojibwe, is reserved as a gift from the Creator. The MN DNR indicated that hydrology changes, water-based recreation, and shoreline development impact the plant and its reproduction ability (MN DNR 2008 Legislative Report). On September 20, 2022, the Associated Press released an article titled "Minnesota Ojibwe harvest sacred, Climate-Imperiled Wild Rice". The article discusses the connection of wild rice to their community and its importance to future generations (see link below). This project will also protect the existing wild rice on lakes and rivers within the Pine and Leech. Wild Rice is one of the quality factors in the RAQ score. All the Pine and Leech River Watershed lands are part of the 1855 Land Cession Treaty Area. According to a Leech Lake News article titled "On This Day: 1855 Treaty Signed between the United States and Ojibwe Bands", the 1837 and 1854 Treaties included stipulations that the Ojibwe would retain their hunting and fishing rights in the ceded territory. This project will benefit the 1855 Treaty area by maintaining wild rice and protecting fisheries, land, and aquatic habitats important for hunting and fishing (See attachments for 1855 Treaty Area).

Activity Details

Requirements

If funded, this program will meet all applicable criteria set forth in MS 97A.056?

Yes

Is the land you plan to acquire (easement) free of any other permanent protection?

Yes

Who will manage the easement?

The individual property owner manages their easement according to the forest stewardship or conservation plans. The Crow Wing SWCD works with BWSR to continue to monitor the easement and any required enforcement. The SWCD can assist the landowner with technical assistance on what they could do with their property and suggest specific best management practices.

Who will be the easement holder?

Once a RIM easement is acquired, BWSR is responsible for monitoring and enforcement into perpetuity. BWSR partners with local SWCDs to oversee, monitor, and inspect its conservation easements. Easements are inspected for the first five consecutive years beginning in the year after the easement is recorded.

What is the anticipated number of easements (range is fine) you plan to accomplish with this appropriation?

The anticipated number of easements is approximately 8-12 easements depending on size and costs.

Land Use

Will there be planting of any crop on OHF land purchased or restored in this program, either by the proposer or the end owner of the property, outside of the initial restoration of the land?

No

Will insecticides or fungicides (including neonicotinoid and fungicide treated seed) be used within any activities of this program either in the process of restoration or use as food plots?

No

Will the eased land be open for public use?

No

Are there currently trails or roads on any of the proposed acquisitions?

Yes

Describe the types of trails or roads and the allowable uses:

This appropriation is funding a program that will have a parcel list identified later. Roads or trails are typically excluded from the easement area if they serve no beneficial purpose to easement maintenance, monitoring, or enforcement. Existing trails and roads are identified during the easement process. Some roads and trails, such as agricultural field accesses and forestry roads for forest management, can remain.

Will the trails or roads remain and uses continue to be allowed after OHF acquisition?

Yes

How will maintenance and monitoring be accomplished?

The easements secured under this project will be managed as part of the BWSR RIM Reserve Program, with 7,500 easements currently in place. Easements are monitored annually for the first five years and every 3rd year after that. BWSR, in cooperation with SWCD, implements a stewardship process to track, monitor quality and assure compliance with easement terms.

Under the terms of the RIM Easement Program, landowners are required to maintain compliance with the easement. A conservation plan is developed with the landowner and maintained as part of each easement. Basic easement compliance costs are borne by the landowner, and periodic enhancements may be cost-shared from a variety of sources.

Will new trails or roads be developed or improved as a result of the OHF acquisition?

Yes

Describe the types of trails or roads and the allowable uses:

Though uncommon, there could be a potential for new minimal use trails, if they contribute to easement maintenance or benefit the easement site (e.g. firebreaks, berm maintenance, etc). Unauthorized trails identified during the monitoring process are in violation of the easement.

How will maintenance and monitoring be accomplished?

The easements secured under this project will be managed as part of the BWSR RIM Reserve Program, with over 7,500 easements currently in place. Easements are monitored annually for each of the first five years and then every 3rd year after that. BWSR, in cooperation with SWCD, implements a stewardship process to track, monitor quality, and assure compliance with easement terms.

Under the terms of the RIM Easement Program, landowners are required to maintain compliance with the easement. A conservation plan is developed with the landowner and maintained as part of each easement. Basic easement compliance costs are borne by the landowner; periodic enhancements may be cost-shared from a variety of sources.

Will the acquired parcels be restored or enhanced within this appropriation?

No

Suppose the landowner would like to do some enhancements to their property. We would encourage the landowner to complete a forest stewardship plan. Once the landowner has a forest stewardship plan, the SWCD would work with the landowner to develop a project plan for their property. The SWCD has cost-share funds available to assist with conservation projects.

Will the land that you acquire (fee or easement) be restored or enhanced within this program's funding and availability?

No

Explain how, when, and source of the R/E work:

Suppose the landowner would like to do some enhancements to their property. We would encourage the landowner to complete a forest stewardship plan. Once the landowner has a forest stewardship plan, the SWCD would work with the landowner to develop a project plan for their property. The SWCD has cost-share funds available to assist with conservation projects.

Timeline

Activity Name	Estimated Completion Date
Completed required reporting for LSOHC.	Semiannual basis
Prioritize RAQ scores 7-9 within a specific HUC 10 subwatershed adjacent to selected high-quality lakes.	August 2024
Work with BWSR and Landowner to complete RIM easements.	January 2025-2026
Outreach and Mailing for specific parcels.	September 2024
Rank Score Applications/Interagency Team Meetings.	January-March 2025

Date of Final Report Submission: 11/01/2028**Availability of Appropriation:** Subd. 7.**Availability of Appropriation**

(a) Money appropriated in this section may not be spent on activities unless they are directly related to and necessary for a specific appropriation and are specified in the accomplishment plan approved by the Lessard-Sams Outdoor Heritage Council. Money appropriated in this section must not be spent on indirect costs or other institutional overhead charges that are not directly related to and necessary for a specific appropriation. Money appropriated for fee title acquisition of land may be used to restore, enhance, and provide for public use of the land acquired with the appropriation. Public-use facilities must have a minimal impact on habitat in acquired lands.

(b) Money appropriated in this section is available as follows:

- (1) money appropriated for acquiring real property is available until June 30, 2028;
- (2) money appropriated for restoring and enhancing land acquired with an appropriation in this section is available for four years after the acquisition date with a maximum end date of June 30, 2032;
- (3) money appropriated for restoring or enhancing other land is available until June 30, 2029;
- (4) notwithstanding clauses (1) to (3), money appropriated for a project that receives at least 15 percent of its funding from federal funds is available until a date sufficient to match the availability of federal funding to a maximum of six years if the federal funding was confirmed and included in the original approved draft accomplishment plan; and
- (5) money appropriated for other projects is available until the end of the fiscal year in which it is appropriated.

Budget

Budget reallocations up to 10% do not require an amendment to the Accomplishment Plan.

How will this program accommodate the reduced appropriation recommendation from the original proposed requested amount?

The SWCD and BWSR scaled all budget items by 63 percent.

Does this project have the ability to be scalable?

Yes

If the project received 50% of the requested funding

Describe how the scaling would affect acres/activities and if not proportionately reduced, why?

A thirty percent funding request would reduce our acre goal to 225 acres and approximately five easements.

Describe how personnel and DSS expenses would be adjusted and if not proportionately reduced, why?

Staff time would be reduced at a different ratio. Doing outreach and completing the RIM Easement process takes much time. We would base the staff time on the number of easements and estimated time to complete the work.

Personnel

Has funding for these positions been requested in the past?

No

Contracts

What is included in the contracts line?

Contract with Hubbard or Cass SWCD to assist with outreach and work with the individual landowners in Leech Lake Watershed. The contract line includes costs covered under the SWCD MJPA, \$2,500 for staff time per easement acquisition.

Easement Stewardship

What is the number of easements anticipated, cost per easement for stewardship, and explain how that amount is calculated?

Perpetual monitoring and enforcement costs have been calculated at \$10,000 per easement. This value is based on using local SWCD staff to monitor landowner relations and existing enforcement authorities. The amount listed for Easement Stewardship covers the SWCD regular monitoring costs, BWSR oversight, and any necessary enforcement.

Travel

Does the amount in the travel line include equipment/vehicle rental?

No

Explain the amount in the travel line outside of traditional travel costs of mileage, food, and lodging

I understand and agree that lodging, meals, and mileage must comply with the current MMB Commissioner Plan:

Yes

Direct Support Services

How did you determine which portions of the Direct Support Services of your shared support services is direct to this program?

BWSR calculates direct support services costs that are directly related to and necessary for each request based on the type of work being done.

Other Equipment/Tools

Give examples of the types of Equipment and Tools that will be purchased?

Signs and stakes to stake the easement boundaries. Other tools are needed to complete the easement work.

Federal Funds

Do you anticipate federal funds as a match for this program?

Yes

Are the funds confirmed?

Yes

In Kind : \$43,257

Other : EPA Small Watershed Funds to help landowners enroll into the SFIA state run 50 year covenant to help reach the Watershed Goals.

Parcel Information

Sign-up Criteria?

[Yes - Sign up criteria is attached](#)

Explain the process used to identify, prioritize, and select the parcels on your list:

The LSPs provided: 62,000 RAQ scores for all private parcels, RAQ score maps, databases, landowner outreach tables, percent of protected land, rare and unique species, species of concern, cisco and wild rice, and easement acre goal for each subwatershed. The local government units will utilize LSPs and CWPs to complete the following items:

Step 1: Filter the outreach database to find parcel RAQ scores 7-9 within a prioritized HUC 10 sub-watersheds adjacent to selected high-quality lakes.

Step 2: Review selected parcels and scores.

Step 3: Develop individual maps for each landowner with the specific easement boundary and price associated with the easement.

Step 4: Mail information on the RIM easement program and map to selected landowners.

Step 5: Rank and score RIM applications with an internal scoring sheet.

Step 6: Host an interagency committee meeting to review all applications.

Step 7: Begin the RIM easement application process with BWSR.
